INTRODUCTION

General Summary—

Estimate of population by provinces ix
Number of births, deaths and marriages ix
Natural increase ix

Births—

Births and birth rates by provinces x
Birth rates in other countries xi
Masculinity of births xi
Births by months xii
Births by age of parents xiii
Births by nativity of parents xiv
Births by racial origin of parents xvi
Illegitimate births xvi

Stillbirths—

Stillbirths by legitimacy and age of mother xviii
Stillbirths by months and sex xix

Infant mortality (under one year)—

Infant mortality by provinces and sex xix
Year of birth and age at death of infants xx
Infant mortality in other countries xxi
Infant mortality by months xxii
Infant mortality by quarters xxiv
Mortality of infants born in calendar year 1924 xxv
Infant mortality by causes xxvi
Causes of infant mortality by sex xxx
Causes of infant mortality by age periods xxx
Infant mortality in cities xxxi

Maternal mortality—

Maternal mortality by age groups for provinces xxxii
Maternal mortality according to attendance, conjugal condition and kind of birth xxxiii
Maternal mortality by causes of death xxxiii
Deaths from various causes associated with pregnancy and child-birth xxxiv

Mortality, all causes—

Total deaths and crude death rates by provinces xxxv
Crude death rates in other countries xxxvi
Age distribution of decedents xxxvi
Deaths of centenarians xxxviii
Adjusted or standardized death rates xxxix
Death rates by months xli
Deaths due to specified causes xli
Death rates from specified causes xliii
Diseases of the heart and arteries xliv
Cancer xliv
Pneumonia xlv
Tuberculosis xlv
Suicides xlvi
Automobile accidents xlvi
Diarrhoea and enteritis xlvii
Influenza xlvii
Communicable diseases xlvii
Proportion of total deaths from each of specified causes xlviii
Proportionate distribution by age-groups of deaths from certain causes li

Marriages— PAGE

Total marriages and crude marriage rates by provinces li
Marriage rates in other countries lii
Marriages by months lii
Conjugal condition of contracting parties liv
Age at marriage liv
Marriages at early ages lvi
Birthplace of bridegrooms and brides lvii

Vital Statistics of the Yukon and the Northwest Territories lviii

GENERAL TABLES

PREFACE

The present is the Fifth Annual Report on Vital Statistics to be issued by the Dominion Bureau of Statistics on data obtained under arrangement with the Registration Departments of Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia. The province of Quebec has entered into this arrangement as from January 1, 1926 and its statistics will be included in the Sixth Annual Report, thus completing the uniform tabulation of Vital Statistics for all provinces in the Dominion.

The First, Second and Third Annual Reports contain a full account of the origin and purpose of the agreement between the Dominion and the provinces for the production of Vital Statistics together with a sketch of the earlier development of these statistics in Canada. Registration of births, deaths and marriages is carried out by the provincial authorities, each province having passed an act making registration compulsory and prescribing that certain items of information be obtained on a uniform basis. Transcripts of these certificates are forwarded to the Dominion Bureau of Statistics and from these the Annual Reports for Canada are compiled. For the year 1925, in addition to the preparation of tables for the present volume, the Bureau of Statistics issued monthly reports and a preliminary annual report, and supplied to the provinces of Nova Scotia, New Brunswick, Ontario, Saskatchewan and British Columbia the compilations required for their respective reports.

As in past years, the statistics of births, deaths and marriages among the Indian population of the co-operating provinces are included in the present Report. Attention is directed to the summary of the Vital Statistics of the Yukon and Northwest Territories at the end of the Introduction.

The collection of the data and the preparation of the Report were under the direction of Mr. E. S. Macphail, Chief of the Demography Branch of the Bureau, assisted by Mr. W. R. Tracey.

R. H. COATS,
Dominion Statistician.

Dominion Bureau of Statistics, January, 1927.

VITAL STATISTICS, CANADA, 1925.

INTRODUCTION

This report presents statistics of births, deaths and marriages for the calendar year 1925 in the eight provinces—Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—which co-operated with the Dominion Bureau of Statistics in producing a national vital statistic. These eight provinces, considered together, are spoken of hereunder as the "Registration Area." The province of Quebec will be included in the report for the year 1926.

The population of the Registration Area by provinces for the years 1921-1925 is shown in Table I. The figures for 1921 are the results of the Census taken in that year; those for the remaining years are estimates.

TABLE I.—POPULATION BY PROVINCES, 1921-25

Province	1921	1922	1923	1924	1925
	(Census)	(Estimated)	(Estimated)	(Estimated)	(Estimated)
Prince Edward Island	88,615	88,000	88,000	88,000	87,000
Nova Scotia	523,837	528,000	530,000	534,000	537,000
New Brunswick	(1) 379,904	392,000	396,000	399,000	403,000
Ontario	2,933,662	2,981,000	3,019,000	3,062,000	3,103,000
Manitoba	610,118	616,000	621,000	627,000	633,000
Saskatchewan	757,510	771,000	783,000	797,000	810,000
Alberta	588,454	592,000	596,000	599,000	603,000
British Columbia	524,582	539,000	544,000	553,000	561,000
Registration Area	**6,406,682**	**6,507,000**	**6,577,000**	**6,659,000**	**6,737,000**

(1) Vital Statistics of Kent Co., New Brunswick were not collected until May 1, 1921. One-third of the census population of this county for 1921 has therefore been excluded.

The number of births, deaths and marriages by provinces during the calendar year 1925 is given in Table II. The figures are divided into rural and urban, the urban comprising all incorporated cities and towns of 1,000 population and over, and the rural the remainder.

TABLE II.—BIRTHS, DEATHS AND MARRIAGES BY PROVINCES, 1925

Province	Births	Deaths	Marriages	Province	Births	Deaths	Marriages
Canada (Registration Area)	**154,861**	**66,477**	**47,217**	Manitoba	14,867	5,245	4,377
Rural	**79,011**	**31,290**	**14,789**	Rural	8,035	2,476	1,499
Urban	**75,850**	**35,187**	**32,428**	Urban	6,832	2,769	2,878
Prince Edward Island	1,675	997	407				
Rural	1,366	696	227	Saskatchewan	20,582	5,628	4,909
Urban	309	301	180	Rural	16,384	3,940	2,603
Nova Scotia	11,400	6,045	2,964	Urban	4,198	1,688	2,306
Rural	5,906	3,295	936				
Urban	5,494	2,750	2,028	Alberta	14,924	4,697	4,355
New Brunswick	10,949	4,960	2,908	Rural	8,690	2,521	1,515
Rural	7,442	3,095	1,411	Urban	6,234	2,176	2,840
Urban	3,507	1,865	1,497				
Ontario	70,122	33,960	23,074	British Columbia	10,342	4,945	4,223
Rural	27,878	13,490	5,833	Rural	3,310	1,777	765
Urban	42,244	20,470	17,241	Urban	7,032	3,168	3,458

Natural Increase.—The net increase to the population of the Registration Area by the excess of births over deaths in 1925 was 88,384, as compared with 91,398 in 1924, 86,715 in 1923, 95,166 in 1922 and 101,257 in 1921. During the year 1925 there were 79,734 male births and 75,127 female births reported, making a total of 154,861 for both sexes, and in the same period the total number of deaths reported was 66,477, of which 35,681 were males as against 30,796 females. There were, therefore, 44,053 males and 44,331 females added, through natural increase, to the population of the Registration Area in 1925, a difference of 278 in favour of the female sex as compared with a balance of 612 on the same side in 1924.

TABLE III.—EXCESS OF BIRTHS OVER DEATHS BY PROVINCES FOR EACH SEX AND BY TOTALS, 1921-25

Province		Male			Female			Both sexes	Pop'n. 1921 Census, 1922-25 estimated	Rate of natural increase per 1,000 pop'n.
		Births	Deaths	Excess of births over deaths	Births	Deaths	Excess of births over deaths	Excess of births over all deaths

BIRTHS

There were in all 158,200 confinements in the Registration Area in the year 1925 as compared with 161,140 in 1924. Of the total number in 1925, 156,262 were single confinements, 1,919 twin confinements and 19 triple confinements. There resulted from these confinements 154,861 living births and 5,296 stillbirths. Of the living births single confinements contributed 151,269, twin confinements 3,547 and triple confinements 45.

Table 6 (General Tables) shows in full detail the manner in which single and multiple confinements contributed to the number of living births and stillbirths, male and female.

Birth Rates.—The crude birth rate (living births) per 1,000 population for 1925 was 23·0 as compared with 23·7 in 1924, 23·9 in 1923, 25·2 in 1922 and 26·4 in 1921. The highest rate amongst the provinces in 1925 was 27·2 for New Brunswick; the lowest was 18·4 for British Columbia.

The number of births and the birth rates by provinces for the years 1921 to 1925 are shown in Table IV.

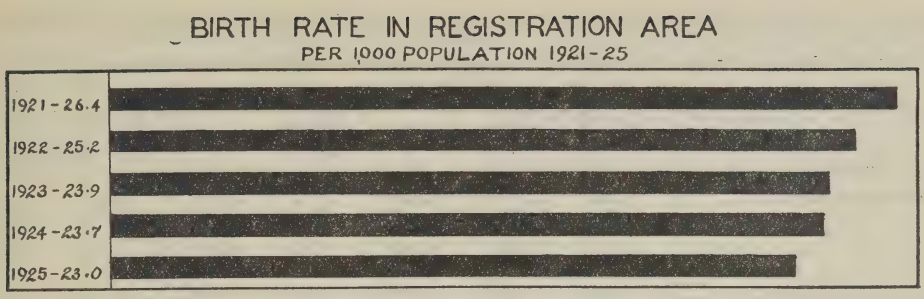

TABLE IV.—LIVING BIRTHS AND BIRTH RATES BY PROVINCES, 1921-25

Province	Living births					Birth rates per 1,000 population				
	1921	1922	1923	1924	1925	1921	1922	1923	1924	1925

Birth Rates in Other Countries.—The number of births in proportion to population for the Registration Area of Canada and for certain other countries is presented in Table V. In some cases the figures are provisional.

TABLE V.—BIRTH RATE IN CANADA (REGISTRATION AREA) AND CERTAIN OTHER COUNTRIES

Country	Year	Population	Living births	Rate per 1,000 population	Country	Year	Population	Living births	Rate per 1,000 population

Masculinity.—Table VI shows by provinces the numerical and per cent distribution of living births according to sex in each year from 1921 to 1925, as well as the number of male births to every 1,000 female births. There was an excess of male births over female births reported in each of the years listed for every province with the exception of Prince Edward Island, which showed an excess of female over male births in 1921, 1923 and 1924. It may be noted that amongst the white population of the Registration Area of the United States, in the ten years 1915 to 1924, the yearly proportion of male births to 1,000 female births varied between 1,055 and 1,059.

England and Wales, where the registration of births has been controlled and directed from one centre for a long period, gives a good illustration of the variation of masculinity of living births in a large population. In the fifty years from 1871 to 1920 the proportion of male births to 1,000 female births ranged from 1,032 in 1898 to 1,060 in 1919, while the highest ratio prior to the Great War was 1,043 in 1875. In 1921 the proportion of male births in England and Wales was 1,051; in 1922, 1,049; in 1923, 1,044; in 1924, 1,047; and in 1925, 1,045 to 1,000 females.

TABLE VI.—BIRTHS (EXCLUSIVE OF STILLBIRTHS) BY SEX AND RATIO OF MALES TO FEMALES, 1921-25

Province		Total births	Male births		Female births		Male births to 1,000 female births

Year	**154,861**	**1,675**	**11,400**	**10,949**	**70,122**	**14,867**	**20,582**	**14,924**	**10,342**

As the figures of the preceding table are to some extent affected by the varying lengths of the different months, the average number of births per day in each month is presented in Table VIII. For the Registration Area as a whole the month of March stood highest with an average of 457 births per day; while December, with 385 births per day, was lowest. These two months have occupied the same relative positions since 1923, the first year for which the computation was made. They correspond to June as the month with the greatest average number of marriages per day, and to March at the opposite extreme.

Considering the provinces individually, March was the leading month for births in Prince Edward Island, Ontario, Saskatchewan and British Columbia; April in Nova Scotia, New Brunswick and Alberta, and June in Manitoba. The lowest daily average was found in November or December for every province, with the exception of Alberta, where October occupied last position.

TABLE VIII.—AVERAGE NUMBER OF BIRTHS PER DAY IN EACH MONTH BY PROVINCES, 1925

Month	Registration Area	P.E.I.	N.S.	N.B.	Ont.	Man.	Sask.	Alta.	B.C.

In order to bring out more clearly the relation between the average daily number of births in each month and the average daily number for the whole year, Table IX presents an index of the daily births per month in 1925 on the base of the average for the whole year as 100 per cent. A comparison with Table LIV will show that the distribution of births throughout the year is much more even than that of marriages.

TABLE IX.—INDEX OF DAILY BIRTHS PER MONTH, 1925 (100 IS TAKEN TO REPRESENT THE AVERAGE DAILY BIRTHS DURING THE WHOLE YEAR)

Births by Age of Parents.—The numerical and per cent distribution of legitimate living births by stated age of parents is given in Table X. In the Registration Area there were nine instances in 1925 where the married mother was under fifteen years of age. Nearly 30 per cent of mothers reported with age in 1925 were under twenty-five years of age, whereas only 10·4 per cent of fathers were within this limit. Only about six per cent of the births to mothers of stated ages were to those 40 years of age and over, while nearly 22 per cent of fathers had reached this period of life. Comparison with preceding years shows these figures to be fairly typical. Only four-tenths of one per cent of all legitimate births were returned with the age of the mother

unstated in 1925, although in 1921 this information had been lacking for no less than 11·6 per cent of the births; the corresponding proportions for fathers were the same as for mothers in both years.

TABLE X.—LEGITIMATE BIRTHS (EXCLUSIVE OF STILLBIRTHS) CLASSIFIED BY AGES OF PARENTS, 1921-25

(1) Less than one-tenth of one per cent.

Table XI gives another view of the age-distribution of married fathers and mothers in the years 1923-25. The fathers and mothers of each calendar year are arranged according to age and then divided into four equal groups. The point of age at which the separation comes is called a quartile. To obtain this it is assumed that those in the same year of age are equally distributed from its lower to its upper limit. In similar manner the deciles divide fathers and mothers of each year into ten equal groups.

In the year 1925 one-quarter of married fathers were under 28·48 years of age, one-half under 33·49 years and three-quarters under 39·17 years. One-quarter of the married mothers were under 24·19 years of age, one-half under 28·68 years and three-quarters under 34·03 years. Nine-tenths of the fathers were under 44·35 years and nine-tenths of the mothers under 38·47 years.

TABLE XI.—QUARTILE AND DECILE AGES OF MARRIED FATHERS AND MOTHERS, 1923-25

Position in array by age		Fathers			Mothers		
		1923	1924	1925	1923	1924	1925

Ninth decile	"	44·06	44·20	44·35	38·36	38·40	38·47

Nativity of Parents.—Table XII shows for each province the percentage distribution of the legitimate births in 1925 by nativity of mother. The high proportion of Canadian-born mothers to those of other nativities in the Maritime Provinces contrasts with the position in the four western provinces and particularly in Alberta, where only a little more than one-third of all mothers were born in Canada. For the Registration Area as a whole the proportion of Canadian-born mothers showed a slight increase every year from 1922 to 1925.

TABLE XII.—PERCENTAGE OF LEGITIMATE CHILDREN BORN ALIVE HAVING CANADIAN BORN, BRITISH BORN OR FOREIGN BORN MOTHERS, BY PROVINCES, 1925

Province	Per cent distribution of children born by nativity of mother			
	Total	Canadian born	British born	Foreign born
Prince Edward Island	100·0	94·8	2·2	3·0
Nova Scotia	100·0	85·4	10·8	3·8
New Brunswick	100·0	91·8	3·7	4·4
Ontario	100·0	68·2	21·3	10·5
Manitoba	100 0	49·0	20·1	30·9
Saskatchewan	100·0	40·8	16·2	43·0
Alberta	100·0	34·5	21·0	44·4
British Columbia	100·0	37·1	37·4	25·4
Total, 1925	**100·0**	**60·6**	**19·3**	**20·1**
1924	**100·0**	**60·0**	**19·7**	**20·4**
1923	**100·0**	**59·2**	**20·4**	**20·3**
1922	**100·0**	**58·2**	**21·2**	**20·6**

Table XIII, which classifies children born in 1925 and 1924 by country of birth of parents, furnishes some idea of the extent to which the coming generation will be the product of Canadian-born, British-born or foreign-born parents. The term "country not specified" under "country of birth" includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only. It will be observed that 57·1 per cent of the children born in 1925 had Canadian-born fathers, 60·7 per cent had mothers born in Canada and in 48·1 per cent of cases both parents were Canadian-born. It thus follows that nearly 70 per cent had at least one parent born in Canada.

TABLE XIII.—NUMBER AND PER CENT PROPORTION OF BIRTHS (EXCLUSIVE OF STILLBIRTHS) HAVING FATHERS AND MOTHERS BORN IN SPECIFIED COUNTRY, 1925 and 1924

Country of birth of parent	Number of births with father, mother or both parents born in specified country						Per cent of births with father, mother or both parents born in specified country

(1) Including Galicia.
(2) Less than one-tenth of one per cent.
(3) Represents for 1925 the number of births where both parents were in the same category as regards birthplace. The difference between this figure (108,642) and total births (154,861) equals the number of births (46,219) where both parents were not in the same category as regards birthplace.
(4) This excludes the percentage (29·8) of "mixed parentage", i.e., where both parents were not in the same category by birthplace.
(5) As explained in note (3) but with 1924 figures.
(6) As explained in note (4) but with 1924 figures.

Racial Origin of Parents.—Table XIV gives the number and per cent proportion of births during the year contributed by the principal racial groups. In addition to indicating the part played by each racial stock in contributing to the number of births, the table permits a comparison of the figures for father and mother with those in which both parents were of the same racial origin, and thus affords some indication of the tendency towards marriage outside of the racial group.

The percentage of cases in which the origin of the mother was not stated was even lower in 1925 than in 1924, though both figures were very satisfactory (six-tenths of one per cent as against nine-tenths of one per cent). The cases in which the origin of the father was not stated included illegitimate births.

TABLE XIV.—NUMBER AND PER CENT PROPORTION OF BIRTHS (EXCLUSIVE OF STILLBIRTHS) HAVING FATHERS AND MOTHERS OF SPECIFIED RACIAL ORIGIN, 1925 AND 1924

(1) Including "Galician."
(2) Less than one-tenth of one per cent.
(3) Represents for 1925 the number of births where both parents were in the same category as regards racial origin. The difference between this figure (101,898) and the total births (154,861) equals the number of births (52,963) where both parents were not of the same category as regards racial origin.
(4) This excludes the percentage (34·2) of mixed parentage, i.e., where both parents were not in the same category by racial origin.
(5) As explained in note (3), but with 1924 figures.
(6) As explained in note (4), but with 1924 figures.

Illegitimate Births.—Table XV gives the number of illegitimate births in 1925, classified by age-groups of the mothers for each province, and also presents a comparison with the years 1921-1924 in number of illegitimate births and in the rate as a percentage of all living births.

Of the total number of unmarried mothers in 1925, about 42 per cent were under 20 years of age as compared with 40 per cent in 1924 and 1923, 38 per cent in 1922 and 33 per cent in 1921. There were 49 ex-nuptial births to mothers under 15 years of age in 1925 as compared with 36 in 1924 and 45 in 1923.

TABLE XV.—NUMBER OF ILLEGITIMATE BIRTHS CLASSIFIED BY AGE OF MOTHER, WITH THE PROPORTION THEY FORM OF TOTAL LIVING BIRTHS, BY PROVINCES, 1925

STILLBIRTHS

The statistics of children born dead during the year 1925 are shown in Table XVII, classified by the age of the mother. The totals of all ages and the percentages which stillbirths form of all births are compared with the preceding years from 1921 onward.

TABLE XVII.—STILLBIRTHS BY AGE OF MOTHER AND LEGITIMACY OF CHILD, 1925

The proportion of stillbirths to living births for certain age groups of married mothers in 1925 is shown in the following statement. The unknown ages listed in Tables X and XVII have been distributed proportionally amongst the groups. The percentage of stillbirths to living births was lowest in the period 20-24 years and showed a steadily advancing rate for each later age group. This result is consistent with that of preceding years.

Age groups of mothers	Number of living births	Number of stillbirths	Stillbirths to 100 living births
15–19 years	8,536	254	3·0
20–24 "	35,840	908	2·5
25–29 "	41,503	1,183	2·9
30–34 "	32,742	1,131	3·5

40–44 "	8,499	480	5·6
45 years and over	867	65	7·5

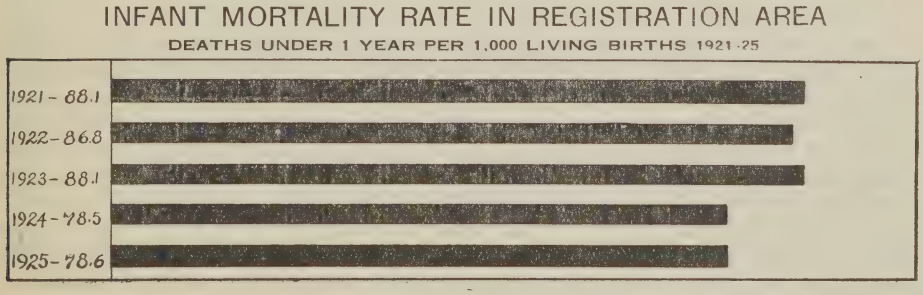

Table XVIII shows for each province the distribution of stillbirths in 1925 by sex and by month of birth. It will be noted that the proportion of males to females was much greater than in living births.

TABLE XVIII.—STILLBIRTHS BY MONTHS, PROVINCES AND SEX, 1925

INFANT MORTALITY

Mortality rates for children under one year of age are based on a comparison of the number of deaths of infants during the year under review with the number of living births reported for the same year. The number of infant deaths in the Registration Area in 1925 totalled 12,169, giving a rate of 78·6 per thousand living births, as compared with 78·5 in 1924, 88·1 in 1923, 86·8 in 1922 and 88·1 in 1921. Thus the reduction in infant mortality shown in 1924 from the figures of the three preceding years was maintained in 1925.

Infant Mortality by Sex.—The figures by sex in Table XIX show for the Registration Area as a whole rates of infant mortality for males ranging from 22 to 28 per cent higher than those for females. Male births in 1925 exceeded female births by 4,607, but if the infant deaths of the same year are deducted from these births to represent with fair accuracy the condition at the end of the first year of life, the net advantage to males is reduced to 2,952.

TABLE XIX.—NUMBER AND RATIO OF INFANT DEATHS TO LIVING BIRTHS BY SEX, 1921–25

Year of Birth and Age at Death.—Although the infant death rates in Table XIX are based on the number of births and deaths reported in 1925, it is evident that a number of the deaths were of infants born in 1924, but who had not attained their first birthday at the time of death. The actual number of such cases was 2,535 or 20·8 per cent of the total infantile mortality reported for the year, leaving 9,634 or 79·2 per cent of the total number as the deaths of infants who were born in 1925 (Table XXIII). The corresponding percentages for 1924 were the same, but for 1923 they were 23·8 and 76·2. The small proportion of deaths from the births of the preceding year explains why the infant mortality rate based on the relation of the deaths in each year to the births in the same year may be properly employed even for the comparison of one year with another, except where a very considerable change in the number of births takes place between successive years.

Table XX, which presents by provinces the proportion of infant deaths in 1925 at each age under one year shows that of infants dying under one year of age, more than one-half failed to live for one month and 37 per cent lived for less than one week. This heavy mortality amongst the new-born explains the large proportion which is contributed to the infant mortality of a calendar year by the births of the same year.

TABLE XX.—PROPORTION PER 1,000 DEATHS OF INFANTS UNDER 1 YEAR OF AGE OCCURRING AT EACH AGE PERIOD, 1925

Infant Mortality in Other Countries.—Table XXI presents a statement of the number of births and deaths of infants under one year of age for the Registration Area of Canada and for certain other countries. In some cases the figures are preliminary. Every country in which the sexes are listed separately shows a higher rate of infant mortality amongst males than amongst females.

TABLE XXI.—INFANT MORTALITY IN THE REGISTRATION AREA OF CANADA AND IN CERTAIN OTHER COUNTRIES

Country	Year	Living births	Infant mortality		Country	Year	Living births	Infant mortality	
			Deaths under 1 year	Rate per 1,000 living births				Deaths under 1 year	Rate per 1,000 living births

In Table XXIII the deaths of infants under one year of age in 1925 are classified according to the month of birth and the month of death. The month of birth may have been either in 1924 or 1925. Vertically the figures give the distribution by months of the births of children who died under one year of age in the specified month; horizontally, they give the distribution by months of the deaths of children under one year of age, born in the specified month. For example, 65 of the children born in March, 1924, died in 1925 before they had attained their first birthday; of these deaths, 27 occurred in January, 26 in February and 12 in March, 1925. If the figures of the table are read diagonally from upper left to lower right, they give the number of infants who died in 1925 in the calendar month of birth, the number who died in the month succeeding that of birth, etc. Thus the diagonal addition of the lowest set, from 439 to 410, shows that for the year 1925 the actual number of infants dying in their birth month amounted to 5,090 or 41·8 per cent of the total infant mortality during the year. Diagonal addition of

the set of items immediately above those last taken (from 155 to 136) shows that the number of children who died in 1925 in the month succeeding that of their birth was 1,759 or 14·5 per cent of the infant deaths during the year. The remainder, who died in a later month than that succeeding the month of their birth, numbered 5,320 or 43·7 per cent of the total infant mortality during 1925.

In Table XXIV the infant mortality of each month is divided into three parts and a rate for each part is calculated on the births which form an appropriate denominator for that part. This enables comparison between the various months of 1925 in regard to (a) the mortality of infants born during the month; (b) the mortality of infants born during the preceding month and (c) the mortality of infants under one year born prior to the preceding month.

In the rate of mortality for infants born prior to the preceding month, adjustment has been made on a simple pro rata basis for the varying lengths of months, with 30·4 days as the standard. No such adjustment has been made for the other two sets of rates, since in these, owing to the concentration of deaths at the earliest ages, the variation in length of the month makes little difference and adjustment would be a matter of considerable difficulty.

The indexes which follow the table show how the rate for a particular month compares with the average of the twelve months. Expressed in this manner, the mortality rate for infants born during the specified month shows a spread from 82 in August to 112 in February and May, the mortality rate for infants born during the preceding month ranges from 72 in August to 129 in March, and the rate for the remaining mortality varies from 57 in July to178 in September. The narrower range for infants born during the specified month is accounted for by the fact that a large part of the early mortality is from causes which reflect pre-natal influences or from those associated with the birth itself.

February, March and April showed an index higher than the average in every section of mortality. July was lower than the average throughout.

The high figures for August, September and October, particularly September, in the index for infants born prior to the preceding month, reflect the influence of a heavier death rate from diarrhoea and enteritis in these months than during any of the remaining months of the year.

To obtain a unified monthly rate of infant mortality the three rates have been combined on the assumption of an equal number of births in each month. September was the highest month of the year, with a unified rate of 101·5 per thousand living births, which gives an index of 130 as

compared with the average. July was the lowest month with a unified rate of only 57·6 per thousand living births, the corresponding index being 74. The unified rates of Table XXIV may be looked upon as adjustments of the more simply calculated rates of Table XXII.

TABLE XXIV.—ANALYSIS OF INFANT MORTALITY BY MONTHS, 1925

Month	Mortality of infants born during specified month			Mortality of infants born during preceding month			Mortality of infants born prior to preceding month				(1) Unified rate per 1,000 births

September	84	118	178	130
October	99	99	127	111
November	100	82	70	85
December	105	102	84	95

Infant Mortality by Quarters.—Table XXV gives rates of infant mortality for the four quarters of 1924 and 1925. The crude rates are those obtained by dividing the infant deaths of the specified quarter by the births of the same quarter and multiplying by one thousand; the adjusted rates have been calculated by a method similar to that used for the adjusted monthly rates above. Difference in length of quarters has slight effect and has been ignored. In each year the adjustment raises the rate for the first two quarters, leaves the third practically untouched and lowers that of the fourth, the reduction in the latter being quite marked in 1925.

The first quarter shows by a considerable margin the highest adjusted rate in each year. The position of the second quarter towards the third and fourth as shown by the adjusted rates of 1925 is much more favourable than in 1924.

TABLE XXV.—INFANT MORTALITY IN THE REGISTRATION AREA FOR THE FOUR QUARTERS OF 1924 AND OF 1925

Quarter	No. of births	No. of deaths under one year of age	Infant mortality rate per 1,000 births	
			Crude	Adjusted
1924—				
1st. quarter	39,968	3,402	85·1	86·7
2nd "	40,934	3,218	78·6	80·2
3rd "	39,444	2,952	74·8	74·7
4th "	37,249	2,803	75·3	73·2
1925—				
1st. quarter	38,903	3,262	83·8	84·1
2nd "	40,621	3,025	74·5	75·9
3rd "	39,433	3,039	77·1	77·1
4th "	35,904	2,843	79·2	75·8

Mortality of Children Born in Calendar Year, 1924.—A compilation of Table XXIII for two successive years allows us to follow children born in a certain calendar year or calendar month through the first year of their lives. Table XXVI illustrates this for the children born in the calendar year 1924. The mortality of such children during the first year of their lives was 78·3 per 1,000 births as compared with 83·5 for the children born in the calendar year 1923. It will be seen that the deaths of children born in 1924 occurred during the two calendar years 1924 and 1925. The table allows some interesting comparisons regarding the mortality of children born in the various months of the year. No doubt, to be conclusive, this information should be obtained over a number of years, while the possibility of compensations in the mortality of the second year of life also requires consideration.

(1) Obtained from table similar to above for births of 1923.

Infant Mortality by Causes.—Of the total infant mortality reported for the Registration Area in 1925, 90·2 per cent was due to the causes of death listed by name in Table XXVII. This proportion compared with 88·9 per cent in 1924, 89·9 per cent in 1923, 90·1 per cent in 1922 and 88·0 per cent in 1921. The percentage of deaths for each sex due to these causes was in each year very close to that of both sexes.

The proportion of infant deaths due to these causes would no doubt have been still higher but for the fact that in some cases the cause of death was not given or was ill-defined. However, as the number of such cases in the Registration Area varied only from 5·7 per cent of the total of infant deaths in 1921 to 3·3 per cent in 1925, they cannot seriously affect the comparison from year to year for particular causes. The proportion of unstated or ill-defined causes was also small in every year for the individual provinces, except New Brunswick and Prince Edward Island. In the former it varied from 33·5 per cent in 1921 to 18·1 per cent in 1925; in the latter from 30·7 per cent in 1922 to 9·5 per cent in 1925. Owing to the small numbers involved the proportion in Prince Edward Island oscillates widely; in New Brunswick each year has marked an improvement on the preceding year.

		1925	**12,169**	**100·0**	**78·6**	**6,912**	**86·7**	**5,257**	**70·0**

As the total infant mortality rates for 1924 and 1925 were practically equal, at a level considerably lower than that of the three years preceding, it is interesting to compare the deaths from the chief causes in the two latest years. The most outstanding increase between 1924 and 1925 was in deaths from gastric and intestinal diseases. This increase interrupted a downward trend which had been continuous and marked since 1921. Influenza, following a light rate in 1924, contributed much more heavily to the total of infant deaths in the next year. Congenital malformations, which had displayed an upward tendency since 1921, were again slightly higher in 1925 and the rate for pneumonia was somewhat in advance of that for 1924, though lower than for the years 1921-23. Bronchitis, on the other hand, registered a slight decrease in the rate from 1924 to 1925.

Taking all these causes collectively, it is found that in 1925 they accounted for a rate of infant mortality which exceeded that of 1924 for the same causes by 3·4 deaths per thousand births. This increase was partly balanced by a continuance of the pronounced downward trend since 1921 in the mortality attributed to congenital debility, together with lower rates than in 1924 for premature births and the residual class of diseases peculiar to early infancy, No. 162. Moreover the infant mortality from measles in 1925 was very light, comparing favourably with any preceding year since 1921, a number of the less important diseases showed reductions in 1925 and the rate from ill-defined causes was only 2·6 per thousand births as compared with 3·2 per thousand in 1924.

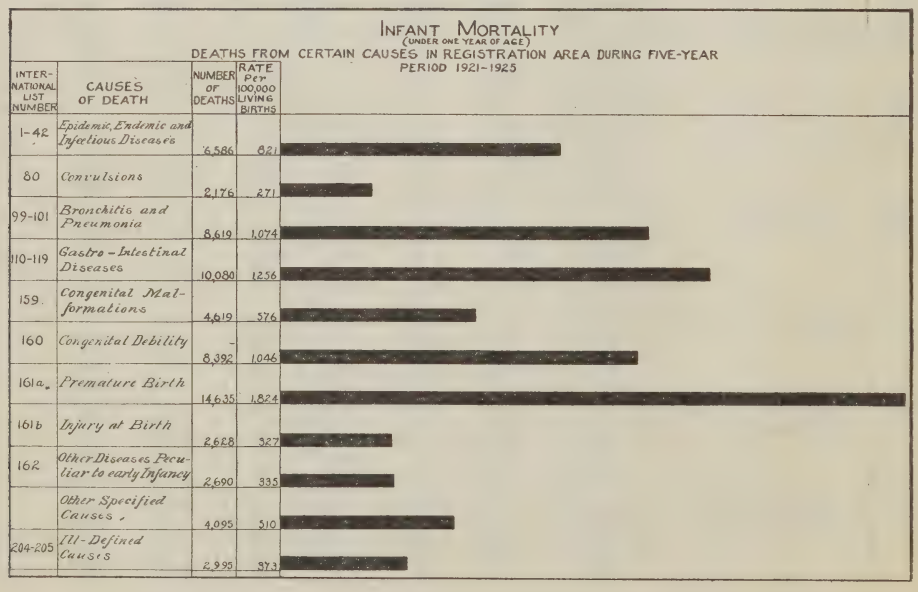

Table XXVIII, which shows by provinces the number of infant deaths in each of the years 1921-25 from some of the most important causes indicates the part played by each province in the variations for the Registration Area as a whole.

Causes of Infant Mortality by Sex.—In Table XXVII rates for certain causes were given by sex. Table XXIX shows for these same causes the per cent proportion which death rates of male infants bore to those of female infants. The comparison is given year by year from 1921 to 1925 and also for the gross deaths of the whole period. Most of the causes listed show a decided advantage for females, the male rate ranging, on the average, between 120 and 130 per cent of that of the other sex. Amongst the more important causes the proportion of the male rate is particularly heavy for injury at birth and convulsions. For influenza it is well above the average. Whooping-cough, on the other hand, showed better rates for males than females throughout, except for 1922 when the rates were equal. The figures for measles give no indication of any significant advantage for either sex.

TABLE XXIX.—PER CENT PROPORTION OF INFANT MORTALITY RATES OF MALES TO THOSE OF FEMALES IN THE REGISTRATION AREA OF CANADA, 1921-25

Causes of Infant Mortality by Age Periods.—Table XXX presents infant mortality rates for certain causes by age periods. The rates are based on the gross births and deaths of the five years 1921-25. The first three months of life are divided into monthly periods and in the first month, the first week of life is separated from the remaining part. The remainder of the year is given by three-monthly age-periods. In order to establish a fair comparison between periods of different lengths, equivalent weekly rates are used. To obtain these, the crude rates for the period "one week and under one month" have been multiplied by 7/23·4, those for a full monthly period by 7/30·4 and those for a three-monthly period by 7/91·2. As thus reduced, the rates represent the mortality per 100,000 living births during an average week of the longer periods.

It should be remembered, however, that the mortality of the first week of life is by no means evenly apportioned. In 1925, for example, the number of deaths in the first twenty-four hours of life was slightly in excess of that during the remainder of the first week. For certain causes the proportion of deaths on the first day was still greater. Of 2,266 children who died under one week of age as a consequence of premature birth, no less than 1,491 succumbed in the first twenty-four hours. A similar, though much less pronounced inequality of distribution characterizes the deaths which take place at ages between one week and one month.

The table brings out the much higher rate at which deaths from causes Nos. 159-162 took place during the first week than during any later period of equal length. Pneumonia has its heaviest incidence at this period, though by a small margin in comparison with the preceding causes. Diarrhoea and enteritis show the highest rate for the period "one week and under one month", but the three next periods approach this figure very closely.

TABLE XXX.—MORTALITY RATES (EQUIVALENT WEEKLY) PER 100,000 LIVING BIRTHS FOR CERTAIN SPECIFIED CAUSES BY AGE PERIODS OF THE FIRST YEAR OF LIFE; FIVE YEARS, 1921–25

Int. list No.	Causes of death	Total under 1 year	Under 1 week	1 week and under 1 month	1 month and under 2 months	2 months and under 3 months	3 months and under 6 months	6 months and under 9 months	9 months and under 12 months

(3) Less than 0·1 per 100,000 births.

Infant Mortality in Cities.—Table XXXI shows the number of living births, the number of deaths under one year and the infantile death rates for cities of 40,000 and over during the years 1921-1925. The highest infant mortality rate for 1925 was that of St. John, N.B. with Ottawa second and Halifax third. In each of the years listed these three cities show the highest rates, though their positions relative to one another vary.

Vancouver had by a considerable margin the lowest rate in 1925. This rate compared favourably with that of the same city for the years 1921-24, in each of which years Vancouver also showed lower infant mortality than any of the other cities. In 1925, as in 1924, Calgary and London were the second and third cities respectively in low rates of infant mortality.

Considering the ten cities as a whole, the rate for 1925, 76·4 per 1,000 living births, was slightly higher than in 1924 when it stood at 74·9. The latter figure had marked a pronounced improvement over the preceding three years and it is a cause for satisfaction to note that most of this improvement has been maintained.

In considering the statistics of births and of infantile mortality in cities, the fact that many non-residents avail themselves of the advantages of urban institutions should not be overlooked.

TABLE XXXI—INFANT MORTALITY IN CITIES OF 40,000 AND OVER, 1921-25

NOTE.—Classification of cities by population is according to the Census of 1921.

MATERNAL MORTALITY

Table XXXII classifies maternal deaths in 1925 by age of decedents for each province in the Registration Area, in comparison with the corresponding figures for preceding years from 1921. In 1925 there were 873 deaths of women from puerperal causes or a rate of 5·6 per 1,000 living births, as compared with 945 or a rate of 6·0 per 1,000 living births in 1924, 849 or a rate of 5·4 in 1923, 907 or a rate of 5·5 in 1922 and 868 or a rate of 5·1 per 1,000 living births in 1921. Comparison of the rate for 1925 with those for previous years may be affected by the constant improvement in reporting due to persistent efforts to secure specific information regarding deaths of women of child-bearing age.

TABLE XXXII.—MATERNAL MORTALITY BY AGE GROUPS FOR PROVINCES, 1921-25

Age groups	Year	Total	P.E.I.	N.S.	N.B.	Ont.	Man.	Sask.	Alta.	B.C.

* Including one unmarried mother aged 14.

Classifying children born alive in 1925 according to the age of the mother, and making a proportionate distribution of those for whom the age was not stated, we are enabled to make the comparison of maternal mortality shown in the following statement. It will be noted that the lowest rate is for mothers between 20 and 24 years of age. The rate for mothers from 40 to 49 years is more than three times that of the group from 20 to 24 years.

Age groups	Living births 1925	Maternal deaths, 1925		Age groups	Living births 1925	Maternal deaths, 1925	
		Number	Rate per 1,000 living births			Number	Rate per 1,000 living births
Under 20 years	10,255	44	4·3	30–39 years	55,944	382	6·8
20–24 years	37,212	143	3·8	40–49 "	9,414	122	13·0
25–29 "	42,016	181	4·3	50 years and over	20	1	(1)

(1) Not calculated

Although the rate of maternal mortality has been calculated on living births, it is clear that many deaths from puerperal causes are associated with stillbirths and miscarriages.

Table XXXIII shows the result of an investigation into this matter. As the information regarding the kind of birth is not on the death certificate, the method followed was to search for the birth amongst the stillbirth certificates, their comparatively small number rendering this feasible. If the birth certificate was not found in this group, it was presumed to be amongst the living births. The number of miscarriages was listed from the statement in the cause of death. If this method of classifying puerperal deaths produced any error, the result should be to increase the number of such deaths associated with living births, at the expense of the other two classes. The total number of living births was 154,861. The number of maternal deaths associated with these totalled 546, giving a rate of 3·5 per 1,000. The total number of stillbirths was 5,296; the maternal deaths associated with these, numbering 160, give a rate of 30·2 per 1,000.

TABLE XXXIII.—DEATHS FROM PUERPERAL CAUSES, CLASSIFIED ACCORDING TO ATTENDANCE RECEIVED, THE CONJUGAL CONDITION OF THE DECEDENT AND THE ASSOCIATION OF THE DEATH WITH A LIVING BIRTH, A STILLBIRTH OR A MISCARRIAGE

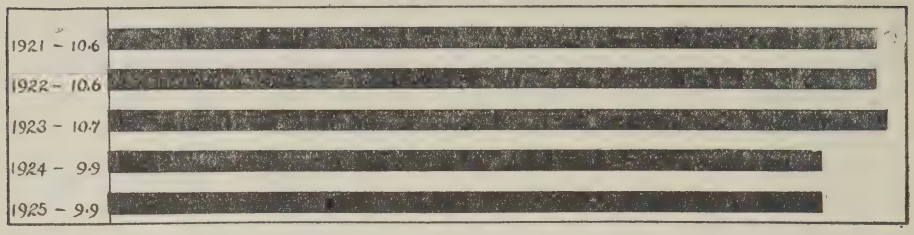
MORTALITY (ALL CAUSES)



The total number of deaths, all ages, reported in the Registration Area for the year 1925 was 66,477 in an estimated population of 6,737,000, giving a crude death rate of 9·9 per 1,000 population. This rate compared with the same figure in 1924, 10·7 per 1,000 in 1923 and 10·6 per 1,000 in 1922 and 1921. It will thus be seen that the rates for 1924 and 1925 were appreciably lower than those of the three preceding years. Table XXXVI gives the total number of deaths and the death rate per 1,000 population in each province for the years 1921-1925. In each of the years listed it will be observed that the four eastern provinces showed rates above the average for the Registration Area, while those of the four western provinces were below this average. Much of this difference in rates is due to the more favourable age composition of the population of the western provinces. As in 1924, the rates for 1925 in every province showed to advantage as compared with those of 1923. Prince Edward Island, Ontario and Manitoba had higher mortality rates in 1925 than in the preceding year, though the difference in Ontario was slight; New Brunswick showed no change and the remaining provinces were lower.

TABLE XXXVI.—TOTAL DEATHS (EXCLUSIVE OF STILLBIRTHS) AND CRUDE DEATH RATES PER 1,000 POPULATION BY PROVINCES, 1921–25

Province	Number all ages					Crude rate per 1,000 population

DEATH RATE IN REGISTRATION AREA

PER 1,000 POPULATION 1921-25

Crude Death Rates in Other Countries.—Table XXXVII presents the crude death rate for Canada in comparison with those for a number of other countries. For some countries the figures are provisional. It will be seen that the Canadian rate is one of the most favourable in the table. The newer countries have in general a more advantageous distribution of population than the older, and this fact contributes to the comparative lowness of their death rates. It may be pointed out that the Canadian rate is for the total population of the Registration Area (aborigines included).

TABLE XXXVII.—ANNUAL CRUDE DEATH RATES IN CANADA (REGISTRATION AREA) AND CERTAIN OTHER COUNTRIES

Country	Year	Death rate	Country	Year	Death rate
Canada (Registration Area)	**1925**	**9·9**	Japan	1925	20·3
Australia	1925	9·2	Netherlands	1925	9·8

Italy	1924	16·6			

Age Distribution of Decedents.—Table XXXVIII presents the quartile (1) and decile (1) ages of decedents, male, female and both sexes, for the years 1923-25. The striking change between 1923 and 1924 in the position of the first quartile may be largely attributed to the decline in infant mortality, while the further change between 1924 and 1925, when the infant mortality rate and the general mortality rate showed no significant movement, is partly explained by the smaller number of births and a corresponding smaller number of infant deaths in 1925, while in contrast the number of deaths at all ages was larger, keeping pace with the increase in population.

(1) The reader desiring an explanation of these terms will find it on page xiv in conjunction with a similar table for fathers and mothers of children born.

TABLE XXXVIII.—QUARTILE AND DECILE AGES OF DECEDENTS BY SEX, 1923-25

Position in array by age	Both sexes			Male			Female

Table XXXIX distributes by age-groups the number of male and female decedents in every year of the period 1921-25.

Table XL, a companion table, gives the percentage distribution of deaths at all stated ages by the same age-groups. In the former table the sexes are shown separately, in the latter both combined and separately. The population according to the Census of 1921, distributed by the same age-groups, is also included in these tables in order that, so far as these figures continue to represent the age composition of the population, the proportion of all deaths contributed by any age-group may be compared with the proportion of the total population contributed by the same group. Thus infants under one year of age formed only 2·3 per cent of the total population in 1921, while the deaths at this period in 1925 amounted to 18·3 per cent of the total mortality. Similarly the groups at advanced ages show a contribution to total deaths far in excess of their proportion in 1921 to the total population.

TABLE XXXIX.—NUMERICAL DISTRIBUTION OF DEATHS BY CERTAIN AGE GROUPS, 1921-25, TOGETHER WITH NUMERICAL DISTRIBUTION OF THE POPULATION BY THE SAME AGE GROUP CENSUS 1921.

For a more condensed comparison of the per cent distribution of deaths by ages for the five years, the following grouping has been made from Table XL. From this statement it will be perceived that the proportion of deaths under one year of age to the total mortality has decreased year by year since 1921. This is partly due to the fact that each year, with the exception of 1924, showed a smaller number of births than the preceding year. The substantial lowering of the infant mortality rate in 1924 was another factor in reducing the proportion of deaths under one year. There is also a downward trend in the proportion of deaths between the first and twentieth birthday and between the twentieth and fortieth birthdays, while the two oldest groups show higher proportions year by year. Omitting from consideration the changing proportions under one year of age and considering the remaining deaths in two groups, namely between the first and fortieth birthday and above the fortieth birthday, the deaths in the latter group are 196 per cent of the former in 1921, 216 per cent in 1922, 233 per cent in 1923, 239 per cent in 1924, and 258 per cent in 1925.

PER CENT DISTRIBUTION OF DEATHS BY BROAD AGE GROUPS, 1921-25

Deaths of Centenarians.—There were 61 deaths of reputed centenarians during the year 1925, as compared with 59 in 1924, 65 in 1923, 63 in 1922 and 72 in 1921. The figures for 1925 comprise 26 male deaths and 35 female deaths. In the following statement, these deaths are presented by provinces and by single years of age. It is impossible to vouch for the authenticity of the ages reported.

Specific Death Rates.—Owing to the lapse of time since the Census of 1921 on which knowledge of the age distribution of the population depends, death rates by age and sex-groups of the population are not included for 1925. The Fourth Annual Report contains such rates for 1921-24 by five-year age-groups up to 25 years and by ten-year age-groups from this point up to 75 years, for the Registration Area as a whole. The Third Annual Report gives similar rates by provinces for the years 1921, 1922 and 1923.

Adjusted or Standardized Death Rates.—The death rates of very young infants and aged people are exceedingly high compared to those at the intermediate ages. It follows that the crude death rate of a community reflects not only the influence of such factors as climate, sanitary conditions, mode of living and heredity, but also differences in the age and sex distribution of population, and, particularly, abnormalities in the proportion which the number of the very young or the very old bear to the total population.

In order to obtain a comparison between communities which will eliminate the effect of differences in age and sex composition, use is made of "adjusted" or "standardized" death rates. These are obtained by applying the specific death rates of the various age and sex groups of the communities which are under survey to the corresponding group populations of a community which has been chosen as a "standard", or in other words, finding what the crude death rates would have been for the communities to be compared if their age and sex groups had been proportionate to those in the standard community.

The "standard" population chosen for this purpose in the present and previous reports is that of England and Wales according to the Census of 1901. This standard is used in the reports of the Registrar General for England and Wales and has also been adopted by the Bureau of the Census of the United States and the Office of Census and Statistics of the Union of South Africa for the computation of "adjusted" death rates. Adjustments of death rates thus made are referred to as having been made on the basis of the "standard million of England and Wales, 1901."

The age and sex distribution per million of the population of England and Wales in 1901 was as follows:—

Age groups	Persons	Males	Females
All ages	**1,000,000**	**483,543**	**516,457**
Under 5 years	114,262	57,039	57,223
5– 9 years	107,209	53,462	53,747
10–14 "	102,735	51,370	51,365
15–19 "	99,796	49,420	50,376
20–24 "	95,946	45,273	50,673
25–34 "	161,579	76,425	85,154
35–44 "	122,849	59,394	63,455
45–54 "	89,222	42,924	46,298
55–64 "	59,741	27,913	31,828
65–74 "	33,080	14,691	18,389
75 years and over	13,581	5,632	7,949

A description of the method by which adjusted death rates were calculated for the years 1921-1923 is contained in the Third Annual Report. The adjusted rates for 1924 and 1925 have been calculated from the crude rates on the assumption that the proportion between the two sets of rates would be the same as it was in the year 1921.

It is to be noted that the crude is an actual, the "adjusted" a hypothetical rate. The sole purpose of the adjustment is to remove the inequalities in crude rates of communities due to differences in age and sex composition. The "adjusted" rate has no other than comparative value, and its absolute size, being partly dependent on the nature of the population chosen as a standard, possesses no particular significance. The sex and age composition of the population of England and Wales in 1901 was, to quote the Registrar General's Report, "exceptionally favourable to low mortality", and although the population of Canada, as a country with large immigration of persons under middle age within a recent period, is also favourably constituted in this respect, the death rate of the Registration Area for 1925, which was 9·9 in its crude form, dropped to 9·5 upon adjustment to the English standard.

The differences between crude and adjusted rates in Table XLI are dependent on the age and sex composition of the various populations. For provinces with populations more favourably constituted than the standard population the adjusted rates are higher than the crude rates. For provinces less favourably constituted the reverse is true.

The following statement shows a comparison of the adjusted death rates of the Registration Area of Canada with those of England and Wales, the Registration States of the United States and the Union of South Africa.

ADJUSTED DEATH RATES, 1921-25

Country	1921	1922	1923	1924	1925
Registration Area of Canada	10·2	10·2	10·3	9·5	9·5
Registration States of United States (white population)	10·7	10·9	11·3	10·6	10·7
England and Wales	11·3	11·6	10·3	10·7	10·7
Union of South Africa (white population)	11·4	10·4	10·7	10·4	–

Death Rates by Months.—Table XLII presents the monthly death rates by provinces for the Registration Area for the years 1921-1925. It will be noted from the table that although the annual rates for 1924 and 1925 were equal, this equality did not extend to the various months, the year 1925 enjoying an advantage throughout the early months, which was balanced by less favourable rates in the latter part of the year.

The rates given in Table XLII are equivalent annual rates, that is to say, before the rate is calculated the deaths are multiplied by 365 and divided by the number of days in the month.

TABLE XLII.—DEATH RATES (CRUDE) PER 1,000 POPULATION IN REGISTRATION AREA BY MONTHS, 1921-25

Deaths due to Certain Specified Causes.—About 87 per cent of all deaths from specified causes recorded in the Registration Area for 1925 were due to the 30 causes of death listed by name in Tables XLIII to L. The proportion varied but slightly from that of the preceding four years.

Table XLIII gives by provinces the number of deaths attributed to each of these causes in 1925, while Table XLIV furnishes a comparison with the years 1921-24 for the Registration Area as a whole.

TABLE XLIII.—NUMBER OF DEATHS FROM SPECIFIED CAUSES BY PROVINCES, 1925

Tables XLV and XLVI are based on the absolute figures of the two tables immediately preceding and give the rates per 100,000 of population for each of the causes listed. Table XLV is confined to the year 1925 and presents the rates for each province, while in Table XLVI comparison is made with the years 1921-24 for the Registration Area as a whole.

	All causes	**1057**	**1,061**	**1,067**	**994**	**987**

Diseases of the Heart.—Considered as one cause, diseases of the heart (International List numbers 87-90) made the greatest single contribution to the mortality of the Registration Area in 1925 as in each of the other years listed, causing in all 7,587 deaths, or a rate of 113 per 100,000 of population, in the year under review, as compared with 108 per 100,000 in 1924, 114 in 1923, 102 in 1922 and 94 in 1921. The rates per 100,000 of population for the years 1921-1925 are shown by provinces in the following statement. In making comparison between rates for the various provinces, the wide differences which exist in age composition should be kept in mind.

DISEASES OF THE HEART (Nos. 87-90)
(Death rate per 100,000 population)

Province	1921	1922	1923	1924	1925
Registration Area	**94**	**102**	**114**	**108**	**113**
Prince Edward Island	108	131	142	142	122
Nova Scotia	107	111	130	113	120
New Brunswick	111	125	120	112	125
Ontario	116	126	145	137	142
Manitoba	70	72	79	79	74
Saskatchewan	45	48	48	47	50
Alberta	52	54	62	67	77
British Columbia	90	101	108	99	104

Diseases of the Arteries.—The mortality rate for diseases of the arteries showed an increase in every year from 1921 to 1925, the rate in the former year being 40 and in the latter year 56 per 100,000 population. Arteriosclerosis accounts for nearly all the deaths under this heading.

Cancer.—Cancer (International List numbers 43-49) was the second cause in importance in 1925 with a total of 5,526 deaths in the Registration Area, or a rate of 82 per 100,000 of population, this rate comparing with 83 per 100,000 in 1924, 78 in 1923, 79 in 1922 and 75 in 1921. Cancer occupied the same relative position in 1924 as in 1925, but in the years 1921-1923 it was exceeded as a cause of mortality by pneumonia (numbers 100-101) and by diseases of early infancy (numbers 160-163). The change in the relative position of cancer in the later years was partly due to an increase in the rate of mortality from this cause, but mainly to the reduction in mortality from pneumonia and diseases of early infancy.

The following statement shows the rate of mortality per 100,000 from cancer in the various provinces of the Registration Area during the period 1921-1925:—

CANCER (Nos. 43-49)
(Death rate per 100,000 population)

Province	1921	1922	1923	1924	1925
Registration Area	**75**	**79**	**78**	**83**	**82**
Prince Edward Island	87	97	94	101	100
Nova Scotia	92	102	100	107	101
New Brunswick	73	82	76	76	83
Ontario	88	88	90	96	95
Manitoba	70	72	67	74	71
Saskatchewan	41	45	46	44	44
Alberta	48	54	49	58	57
British Columbia	74	83	83	83	84

The rate for the Registration Area, although slightly lower in 1925 than in 1924, shows some indication of an upward trend during the period 1921-1925, but this period is too short to warrant any definite conclusions in the matter. It may also be noted that so far as any change in age distribution may have taken place between 1921-1925, it would probably favour an increase in the crude rate. The possible effect of better diagnosis year by year has also to be considered in discussing the trend of cancer mortality.

In each of the years listed, the cancer death rate of females exceeded that of males. The death rates for each sex according to the site of the cancer are shown in the following statement. It will be noted that the rates from cancer of "other or unspecified organs" show a downward tendency, which is especially pronounced in the case of females. It may be presumed that the decrease is largely in the cancer of "unspecified organs" and so far as these are concerned results from better certification. The practice of returning defective certificates for more specific inforna-

tion naturally produces a growing tendency to greater exactitude on the part of the doctors certifying. Granted that the decrease is mainly in the "unspecified" not in the "other" organs, it must have resulted in additions to some or all of the specified sites. This should be kept in mind when making comparisons for particular sites.

CANCER DEATH RATES BY SITES

(Per 100,000 population)

Site of Cancer	1921	1922	1923	1924	1925
MALES					
All sites	**69**	**71**	**70**	**75**	**75**
Buccal cavity	4	5	6	7	6
Stomach and liver	32	31	32	34	36
Peritoneum, intestines and rectum	10	11	11	12	12
Skin	2	3	3	3	3
Other or unspecified organs	21	21	19	19	18
FEMALES					
All sites	**82**	**86**	**87**	**91**	**90**
Buccal cavity	1	1	1	1	1
Stomach and liver	24	27	28	27	27
Peritoneum, intestines and rectum	12	13	13	13	14
Genital organs	14	15	16	18	18
Breast	12	13	14	17	18
Skin	1	1	1	1	1
Other or unspecified organs	18	16	14	13	11

Pneumonia.—Pneumonia, including bronchopneumonia and capillary bronchitis as well as lobar and pneumonia undefined, ranked third amongst the causes of death in 1925 with a rate of 76 per 100,000 population as against 75 in 1924, 95 in 1923, 98 in 1922 and 93 in 1921. The only province which showed a marked increase in the rate between 1924 and 1925 was New Brunswick, where the deaths per 100,000 from pneumonia advanced from 89 in the former year to 112 in the latter. The following statement shows the rates by provinces from 1921-1925:—

PNEUMONIA (Nos. 100 and 101)

(Death rates per 100,000 population)

Province	1921	1922	1923	1924	1925
Registration Area	**93**	**98**	**95**	**75**	**76**
Prince Edward Island	109	121	155	93	80
Nova Scotia	96	126	127	96	96
New Brunswick	132	123	114	89	112
Ontario	102	105	102	76	80
Manitoba	92	91	85	82	79
Saskatchewan	66	71	81	70	62
Alberta	76	77	74	67	62
British Columbia	67	82	53	46	47

Bronchitis.—Like pneumonia, bronchitis showed in 1925 a death rate differing slightly from that of the preceding year though much lower than in any of the years 1921-1923.

Diseases of Early Infancy.—This group of causes (International List numbers 160-163) which taken together rank fourth in mortality in 1925, are treated in the section on Infant Mortality (pp. xxvi et seq).

Tuberculosis.—The mortality rate for tuberculosis of the respiratory system in 1925, 56 per 100,000, was slightly lower than in the preceding year. Over the period 1921-25 the rate from tuberculosis of the respiratory system declined from 61 to 56 per 100,000 population, and the

rate from other forms of tuberculosis from 14 to 11 per 100,000. The following statement shows the rate by provinces for all forms of tuberculosis from 1921 to 1925:—

TUBERCULOSIS (Nos. 31–37)
(Death rates per 100,000 population)

Province	1921	1922	1923	1924	1925
Registration Area	**75**	**73**	**73**	**70**	**67**
Prince Edward Island	144	127	106	114	99
Nova Scotia	134	132	123	125	108
New Brunswick	109	107	111	105	100
Ontario	71	66	66	60	59
Manitoba	69	61	65	62	61
Saskatchewan	43	44	45	46	42
Alberta	53	53	61	61	59
British Columbia	78	95	97	95	96

The number of deaths in each sex from the various forms of tuberculosis is listed below for the years 1921-1925.

DEATHS FROM VARIOUS FORMS OF TUBERCULOSIS
(Absolute figures)

Violent Deaths.—The number of suicides, 586 in 1925, showed during the period 1921-25 a general upward trend in comparison with estimated increase in population. By sex the figures were as follows:

SUICIDES
(Absolute figures)

Sex	1921	1922	1923	1924	1925
Males	342	376	404	399	466
Females	89	111	134	136	120

Violent deaths other than suicides numbered 3,873 in 1925, giving a rate of 57 per 100,000 population. This rate was little changed from the four preceding years. By sex, these deaths numbered 2,845 for males and 1,028 for females. Homicides, in which justifiable homicides are included, totalled 98, of which 70 were male and 28 female deaths.

There were 425 deaths from automobile accidents, 302 male and 123 female. The following statement shows by provinces the number of deaths classified to automobile accidents during the five years 1921-25. These include deaths resulting from the collision of automobiles with other vehicles, such as horse-drawn vehicles, street-cars and trains.

DEATHS FROM AUTOMOBILE ACCIDENTS
(Absolute figures)

Province	1921	1922	1923	1924	1925
Registration Area	**197**	**237**	**355**	**340**	**425**
Prince Edward Island	–	1	2	1	2
Nova Scotia	11	16	24	13	26
New Brunswick	8	11	20	16	20
Ontario	108	103	208	205	256
Manitoba	9	25	18	17	32
Saskatchewan	9	20	19	16	18
Alberta	18	22	22	16	26
British Columbia	34	39	42	56	45

Nephritis.—Deaths from nephritis numbered 2,880 in 1925, giving a rate of 43 per 100,000 population. This cause has shown an increased rate year by year since 1921, when the figure stood at 32 per 100,000. The increase is in chronic nephritis (including unspecified over 10 years of age), which far outweighed the deaths from the acute form in every year.

Cerebral Haemorrhage, Apoplexy.—The rate from this cause, which was 34 per 100,000 in 1925 and 35 in 1924, has shown a decline from 41 per 100,000 in 1921. This decline may be associated with the increase already noted in the rates from nephritis and arterial diseases, owing to the growing habit of certifying the original disease which resulted in the haemorrhage.

Diarrhoea and Enteritis.—Deaths from these causes numbered 2,198 in 1925, giving a rate of 33 per 100,000 of population. This rate was 5 per 100,000 higher than in the preceding year and slightly higher than in 1923, but was considerably below the figures for 1921 and 1922. The following statement shows the number of deaths from diarrhoea and enteritis under 2 years of age and the number at higher ages in each of the years from 1921-1925.

DIARRHOEA AND ENTERITIS

(Absolute figures)

Year	Total	Under two years	Two years and over
1921	3,218	2,695	523
1922	2,843	2,440	403
1923	2,061	1,696	365
1924	1,891	1,555	336
1925	2,198	1,787	411

Influenza.—Deaths attributed to influenza numbered 2,182 in 1925, giving a rate of 32 per 100,000 population. This rate compared with 20 per 100,000 in 1924, 54 in 1923, 37 in 1922 and 15 in 1921. The following table shows the absolute number of deaths from influenza by months from the years 1921 to 1925:—

DEATHS FROM INFLUENZA BY MONTHS

(Absolute figures)

Month	1921	1922	1923	1924	1925
January	85	193	298	107	192
February	154	291	1,144	152	271
March	154	640	1,049	191	426
April	143	583	517	210	381
May	84	235	203	162	258
June	47	91	78	80	116
July	27	49	58	33	56
August	27	43	35	31	54
September	38	33	29	40	81
October	54	54	54	77	106
November	64	83	50	85	104
December	63	105	63	138	137
Total	**940**	**2,400**	**3,578**	**1,306**	**2,182**

In the present report, as in that of the preceding year, deaths attributed to influenza have been sub-divided in considerable detail according to the various complications accompanying or arising from the disease. Table 26 of the General Tables, page 146, may be consulted as an example.

Communicable Diseases.—The five epidemic diseases which come first in Tables XLIII-XLVI had a combined rate of 29 per 100,000 in 1925. This was markedly lower than in any of the other

years listed. Diphtheria, which has shown a consistent downward trend during the five year period contributed largely to the decline, deaths from this cause numbering only 615 in 1925 as compared with 848 in the preceding year and 1,297 in 1921. The number of deaths from whooping-cough showed a slight increase from the preceding year, though insufficient to make any significant difference in the rate. Deaths from scarlet fever numbered only 258 in 1925 as compared with 329 in 1924, the figure for 1925 being by a considerable margin the lowest recorded in any of the years listed. Mortality from measles was remarkably light in 1925, deaths from this cause numbering only 171 as compared with 483 in the preceding year. The smallest number of deaths from measles previously recorded in the five-year period was 211 in 1922. Typhoid fever with 311 deaths in 1925 showed some advance on the preceding year when the mortality amounted to only 287, but the 1925 figure was considerably lower than those for the years 1921 to 1923.

Proportionate Distribution of Deaths by Causes.—Table XLVII shows by provinces the proportion which deaths due to each of the causes listed formed of all deaths in 1925, while in Table XLVIII comparison is made on this basis with the years 1921-24 for the whole Registration Area. The relative positions occupied by the various causes in these tables must be, of course, the same as those in Tables XLV and XLVI.

TABLE XLVII.—PROPORTION OF DEATHS FROM CERTAIN CAUSES PER 1,000 DEATHS FROM ALL SPECIFIED CAUSES, 1925

Int. list No.	Causes of death	Registration Area	P.E.I.	N.S.	N.B.	Ont.	Man.	Sask.	Alta.	B.C.

Proportionate Distribution by Causes of Deaths in Certain Age Groups.—Table XLIX gives the proportion per 1,000 which deaths due to each of the causes listed formed of the total mortality of each sex and age group in 1925. The table furnishes some interesting data as to the factors which mainly contribute to the mortality of each sex at the different periods of life. The mortality under 5 years of age is very heavily weighted by the deaths due to the diseases of early infancy (International List numbers 160-163). These diseases accounted for almost one-third of the deaths occurring in this age group for females and slightly more than that figure for males. Pneumonia (numbers 100-101) and diarrhoea and enteritis (numbers 113-114) also contributed heavily to the total mortality during this period. It may be noted that 79·4 per cent of the deaths of males and 76·6 per cent of the deaths of females in this age group took place before the end of the first year of life.

In the age group 5-14 years, deaths as a result of accidents (International List numbers 175-203), in which also a very few homicides are included, contributed one-quarter of the male deaths and more than one-tenth of the female deaths from specified causes. Tuberculosis in all its forms stood next to accidents as a cause of death for males in this group, accounting for 106.2 out of every 1,000 deaths while diphtheria was third with 105.5. Tuberculosis was the leading cause for females, the proportion being 147.5 deaths in every 1,000 from all specified causes. Diphtheria stood in second place for females, with a proportion of 123.5 per 1,000. Of the remaining diseases which chiefly contributed to mortality between the 5th and 15th birthday, the most important were appendicitis, pneumonia, diseases of the heart, scarlet fever and influenza.

In the age group 15-29 years, violent deaths (exclusive of suicides) again formed the leading class for males, comprising over one-quarter of the total number of deaths from specified causes. Tuberculosis of the respiratory system claimed 228 deaths out of each 1,000 for males at this age and tuberculosis of other organs accounted for 33 deaths, so that the mortality from these two combined almost equalled the deaths from violence and with the latter accounted for more than half of the total male deaths in the age-group.

TABLE XLIX.—PROPORTION OF DEATHS FROM CERTAIN CAUSES PER 1,000 DEATHS FROM ALL SPECIFIED CAUSES BY SEX AND AGE GROUPS, IN REGISTRATION AREA, 1925

Amongst females between the 15th and 30th birthday, tuberculosis of the respiratory system was easily the most prominent cause, with 321 deaths out of every 1,000 from all causes, while other forms of tuberculosis produced 44 deaths in every 1,000. Puerperal causes contributed 143 deaths out of every 1,000 within these age limits.

In the age group 30-49 years, the distribution of male deaths gave less prominence to any particular cause, though deaths from tuberculosis and those from violence were most important, accounting respectively for 172 and 157 out of every 1,000 deaths for which the cause was specified. Ninety-five out of every 1,000 male deaths at this period were ascribed to diseases of the heart, 71 to cancer and 64·5 to pneumonia. Suicides accounted for 40 male deaths out of every 1,000 within these age limits, this proportion being the highest listed for suicides in the table. For females between the 30th and 50th birthday, tuberculosis had the highest proportion of deaths with 149 out of every 1,000 from all specified causes, 133 of the deaths being from tuberculosis of the respiratory system and 16 from other forms. Cancer accounted for 147, and puerperal causes for 120·5 of every 1,000 deaths. In the first half of the age-period puerperal causes were assigned for 194·4 and cancer for only 82·7 per 1,000 of all deaths from specified causes; in the second half the proportion for puerperal causes was only 55·1, while that of cancer rose to 203·3.

Diseases of the heart formed the most important cause of death for both sexes after the 50th birthday, contributing 186·5 out of every 1,000 male deaths and 185 of every 1,000 female deaths. Cancer, diseases of the arteries, pneumonia, nephritis, and cerebral haemorrhage were

amongst other causes with high proportions of deaths. "Senility" was given as the cause of death in 51 out of every 1,000 male deaths in this age group and 75 out of every 1,000 female deaths.

Proportionate Distribution by Age Groups of Deaths from certain Causes.—Table L shows for 1925 the proportionate distribution by age groups of the deaths from each of the causes listed in the tables immediately preceding with the exception of those diseases whose title indicates the class by age which is affected.

TABLE L.—PROPORTION OF MALE AND FEMALE DEATHS IN EACH AGE GROUP PER 1,000 DEATHS AT ALL AGES FROM EACH OF CERTAIN CAUSES, 1925

MARRIAGES

The total number of marriages reported for the Registration Area in 1925 was 47,217 as against 47,538 in 1924, 49,102 in 1923, 47,811 in 1922 and 51,073 in 1921. There was thus a decrease of 321 marriages in 1925 as compared with 1924, while the number was 3,856 less than in 1921, the year which showed the greatest number of marriages during the five-year period. Considered by provinces, all western provinces showed a greater number of marriages in 1925 than in 1924; the Maritime Provinces registered a slight decrease, while in the Province of Ontario there was a dropping off of nearly 1,000 from 24,038 in the earlier year to 23,074 in the later. The marriage rate for the whole Registration Area for 1925 was 7·0 per thousand population, as compared with 7·1 in 1924, 7·5 in 1923, 7·3 in 1922 and 8·0 in 1921. The absolute figures and the rates for each of the years mentioned are shown by provinces in Table LI.

TABLE LI.—TOTAL MARRIAGES AND CRUDE MARRIAGE RATES PER 1,000 POPULATION BY PROVINCES, 1921–25

Province	Number of marriages					Rate per 1,000 population

Japan	1925	8·7			

Marriages by Months.—The total number of marriages in each month of 1925 is shown by provinces in Table LIII and the average number per day in each month is listed in Table LIV. June was the leading month for the Registration Area as a whole, with an average daily number of 191 weddings. Considered by individual provinces, this month led in Ontario and British Columbia, and was second in Nova Scotia, New Brunswick and Manitoba. September, with an average of 167 marriages per day was the second month in popularity so far as the whole Registration Area was concerned. This month was the favourite in Nova Scotia and New Brunswick and stood second in Prince Edward Island, Ontario and British Columbia. November was the third month for the Registration Area as a whole, and the leading month in Manitoba and Saskatchewan, its popularity over other months being especially marked in Saskatchewan. March had the smallest average number of marriages for the Registration Area and was also

lowest in Nova Scotia, New Brunswick, Ontario, Manitoba and British Columbia. The month of May stood next to March in low average number of daily marriages and was the lowest month in Prince Edward Island, Saskatchewan and Alberta.

TABLE LIII.—NUMBER OF MARRIAGES IN EACH MONTH BY PROVINCES, 1925

Month	Registration Area	P.E.I.	N.S.	N.B.	Ont.	Man.	Sask.	Alta.	B.C.

The figures shown in Table LIV have been reduced to an index in Table LV with the daily average for the whole year taken as 100. This form of the figures enables the amount of deviation to be more easily seen. It will be observed that for the Registration Area as a whole the daily average of marriages in June, September, October, November and December exceeded that for the whole year, while the figure for each of the remaining months is below the year's average.

TABLE LV.—INDEX OF DAILY MARRIAGES PER MONTH, 1925

(Taking 100 as representing the average daily marriages during the whole year)

Month	Registration Area	P.E.I.	N.S.	N.B.	Ont.	Man.	Sask.	Alta.	B.C.
January	79·4	68·8	78·2	55·8	73·2	97·9	105·8	84·1	76·4

Conjugal Condition of Contracting Parties.—Of each 1,000 bridegrooms in 1925 there were 896·4 bachelors, 94·4 widowers and 9·2 divorced men, while of each 1,000 brides there were 917·3 spinsters, 73·6 widows and 9·2 divorced women.

The proportionate distribution of marriages in 1925 according to the conjugal condition of each contracting party is shown in Table LVI. Marriages between persons one or both of whom were divorced have been omitted from consideration in this table, as they formed only 1·7 per cent of the total number of marriages reported in the year.

TABLE LVI.—PROPORTIONAL DISTRIBUTION OF MARRIAGES ACCORDING TO CONJUGAL CONDITION OF CONTRACTING PARTIES, EXCLUSIVE OF DIVORCED PERSONS, BY PROVINCES, 1925

Province	Total	Bachelors and		Widowers and	
		Spinsters	Widows	Spinsters	Widows
Prince Edward Island	1,000·0	851·9	39·5	71·6	37·0

Age at Marriage.—The average age of bridegrooms in 1925 was 29·8 years, as compared with 29·7 years in 1924 and 1923, and 29·9 years in 1922 and 1921. The average age of brides in 1925 was 25·3 years, as compared with 25·2 years in 1924, 25·3 years in 1923, 25·4 years in 1922 and 25·5 years in 1921.

The average ages of bridegrooms and brides in 1925 are shown by Provinces in the next table.

TABLE LVII.—AVERAGE AGE OF CONTRACTING PARTIES, 1925

Province	Average age of grooms	Average age of brides	Average excess of groom's age over bride's
Prince Edward Island	30·2	26·0	4·2
Nova Scotia	29·8	25·3	4·5
New Brunswick	29·3	24·8	4·5
Ontario	29·5	25·5	4·0
Manitoba	30·3	25·1	5·2
Saskatchewan	29·6	24·0	5·6

1924	**29·7**	**25·2**	**4·5**
1923	**29·7**	**25·3**	**4·4**
1922	**29·9**	**25·4**	**4·5**
1921	**29·9**	**25·5**	**4·4**

Table LVIII shows the quartile(1) and decile(1) ages of bridegrooms and brides for the years 1923, 1924 and 1925. In calculating these dividing points it has been assumed that the ages of bridegrooms or brides falling in a certain year of age are distributed equally throughout that year from the lower to the higher limit.

(1) The reader desiring an explanation of these terms will find it on page xiv in conjunction with a similar table for fathers and mothers of children born.

TABLE LVIII.—QUARTILE AND DECILE AGES OF BRIDEGROOMS AND BRIDES, 1923-25

Position in array by age	Bridegrooms			Brides		
	1923	1924	1925	1923	1924	1925
First quartile.....Years of age	23·80	23·72	23·74	20·29	20·12	20·18
Second " ..... "	27·33	27·19	27·16	23·04	22·89	22·90

Ninth " ..... "	40·71	41·06	41·28	34·67	34·90	34·99

In Table LIX marriages have been grouped first by age of bridegroom and secondly by age of bride. It may be noted that when the contracting parties are grouped by age of bridegroom, the average difference in age is lower for the younger groups than for the older, being only 1·7 years for grooms from 20 to 24 years of age, and 10·3 years for grooms from 45 to 49 years of age. This is easily understood when it is considered that the groom's age is generally in excess of the bride's, and, therefore, as his age increases, the range of reasonably possible ages for the bride widens. When the parties are grouped by the age of the bride less regularity is observed. Brides from 20 to 24 years of age married men whose age showed an average excess greater than that for brides of the older groups, but the excess does not diminish progressively with each higher age group; for example, it is 4·1 years for brides of 40-44 years of age as compared with 3·6 years for brides of 35-39 years.

TABLE LIX.—AGES OF BRIDEGROOMS AND BRIDES, 1925

By age groups of bridegroom				By age groups of bride			
Age group of bridegroom	Average age of bride-groom	Average age of bride	Average excess of bride-groom's age	Age group of bride	Average age of bride	Average age of bride-groom	Average excess of bride-groom's age
Under 20 years.....	19·2	19·2	–	Under 20 years.....	18·5	24·8	6·3
20–24 years.....	22·8	21·1	1·7	20–24 years.....	22·3	26·8	4·5

50 years and over.....	59·2	48·2	11·0	50 years and over.....	57·9	60·7	2·8

The percentage distribution of bridegrooms of 1925 into six age groups is shown in Table LX for the Registration Area as a whole and for each province. For the Registration Area the comparison is carried back to 1921. The corresponding proportions for brides are shown in Table LXI. It will be observed that in 1925, 2·4 per cent of the grooms and 23·4 per cent of the brides were under twenty years of age. Over the five-year period the proportion in this group for grooms shows a slight upward trend. This is also to some extent in evidence in the case of the brides, but the movement is more irregular and would require a longer period of time to gauge its significance. The largest percentage of bridegrooms in the youngest age group in 1925 was in New Brunswick, where 3·7 per cent of the grooms had not attained their twentieth birthday. This age group for brides showed to greatest importance in Saskatchewan with 29·9 per cent but this figure was closely approached by New Brunswick and Alberta with 29·3 per cent.

Bridegrooms of 40 years of age and over in the Registration Area formed 11·4 per cent of the total in 1925. Brides of this age group contributed 5·9 per cent of all brides in the same year. This age group showed no definite trend with either sex over the five year period.

The highest proportion in 1925 of grooms who had attained the fortieth birthday was recorded in British Columbia, where 17·4 per cent of all grooms came in this category; the lowest figure was returned by the neighboring province of Alberta, with only 9·9 per cent. British Columbia also contributed the largest proportion of brides who had passed the fortieth birthday; 8·6 per cent of the brides in the province being found in this age group. Saskatchewan and Alberta, which were least represented in this class of brides, had only 4·1 per cent and 4·2 per cent respectively at this age.

TABLE LX.—PER CENT DISTRIBUTION OF MARRIAGES BY AGE OF BRIDEGROOM FOR PROVINCES, 1925

Province		Age of bridegroom

Marriages at Early Ages.—All of the provinces of Canada have enacted legislation fixing a minimum age for marriages, at least without the consent of parents. The provisions of the laws governing this question in the various provinces were summarized in the Third Annual Report (P. xliv of Introduction.)

The marriages in which the bride was 16 years or under numbered 953 throughout the whole Registration Area in 1925, as compared with 832 in the preceding year and with 820 in 1923. Although thus showing an increase, the figure for 1925 comprised only 2 per cent of all marriages. Of these 953 brides no fewer than 772 had passed the sixteenth birthday. It is of course, possible that there was some exaggeration of age in the case of very young brides, nevertheless, the figures in Table LXII indicate that marriages of very youthful brides are infrequent throughout the Registration Area.

Total	**953**	**1**	**24**	**156**	**772**	**1**	**6**	**6**	**43**	**1**	**17**	**66**	**1**	**18**	**75**	**308**	**2**	**10**	**59**	**3**	**17**	**117**	**22**	**112**	**8**	**61**

There were two bridegrooms aged 15 years and five aged 16 years in the Registration Area in 1925. These were the lowest ages recorded for grooms. The provinces in which the marriages occurred and the ages of the respective brides are shown in the following statement:—

Province	Grooms aged 15 years	Ages of their brides	Grooms aged 16 years	Ages of their brides
Ontario	2	16 years 17 years	3	17 years (2) 18 years (1)
British Columbia	–	–	2	16 years 31 years

Birthplace of Bridegrooms & Brides.—Table LXIII shows the percentage distribution of bridegrooms by nativity in 1925, while Table XLIV shows the corresponding distribution for brides. The proportion of bridegrooms born in Canada varied from 95·8 per cent in Prince Edward Island to only 37·5 per cent in Alberta, while the range for Canadian-born brides was between 95·6 per cent in Prince Edward Island and 42·6 per cent in British Columbia. As might be expected, the western provinces showed a much lower proportion of contracting parties born in Canada than was the case in the eastern provinces.

TABLE LXIII.—PER CENT DISTRIBUTION OF BRIDEGROOMS BY NATIVITY, 1925

VITAL STATISTICS OF YUKON AND THE NORTHWEST TERRITORIES

The births, deaths and marriages reported for the Yukon and the Northwest Territories of Canada for the year 1925 are listed in the following tables. The statistics of these territories are presented separately from those for the eight provinces of the Registration Area because (1) the figures are not regarded as complete and the population for the year under review is not known with sufficient accuracy to warrant the calculation of rates, (2) the number of births, deaths and marriages is so small as to make no material difference to the totals for the Registration Area, (3) the various headings of classification used for the births, deaths and marriages of the eight provinces could not be applied to these returns, owing to lack of information.

TABLE LXV.—VITAL STATISTICS OF THE YUKON TERRITORY FOR 1925

Months	Births	Deaths	Marriages
January	1	1	–
February	2	2	–
March	5	6	1
April	2	6	1

PRÉFACE

Ce travail est le cinquième rapport annuel sur les statistiques vitales que publie le Bureau Fédéral de la Statistique. Ces statistiques sont basées sur les données fournies, après entente, par les régistraires généraux des provinces de l'Ile du Prince-Edouard, de la Nouvelle-Ecosse, du Nouveau-Brunswick, de l'Ontario, du Manitoba, de la Saskatchewan, de l'Alberta et de la Colombie Britannique. La province de Québec s'est jointe aux autres provinces depuis le premier janvier 1926. Les statistiques qui lui sont propres figureront à notre sixième rapport annuel, complétant ainsi les informations sur l'état civil dans toutes les provinces canadiennes.

Le premier, le deuxième et le troisième rapports annuels donnent un aperçu complet de l'origine et du but de cette entente entre le Dominion et les provinces pour la compilation de statistiques vitales et décrivent les débuts de ces statistiques au Canada. L'enregistrement des naissances, décès et mariages est fait par les autorités provinciales, chaque province ayant décrété l'enregistrement obligatoire suivant des formules uniformes visant à certaines informations définies. Des copies de ces actes sont envoyées au Bureau Fédéral de la Statistique et leur compilation sert de base au rapport annuel. En 1925, le Bureau Fédéral de la Statistique, outre la préparation de ces tableaux, a publié des bulletins mensuels et un rapport annuel préliminaire, et a fourni aux provinces de Nouvelle-Ecosse, Nouveau-Brunswick, Ontario, Saskatchewan et Colombie Britannique, les compilations dont elles avaient besoin pour leurs rapports respectifs.

Comme par le passé, on a fait entrer dans ce rapport les naissances, les décès et les mariages de la population indigène habitant les huit provinces participantes. La note sur les statistiques vitales des territoires du Nord-Ouest et du Yukon à la fin de l'introduction est une innovation digne d'attention.

Le dépouillement des données et la préparation du rapport ont été exécutés sous la direction de M. E. S. Macphail, chef de la section de la Démographie du Bureau, aidé par M. W. R. Tracey.

R. H. COATS,
Statisticien du Dominion.

Bureau Fédéral de la Statistique, janvier 1927.

STATISTIQUES VITALES DU CANADA, 1925

INTRODUCTION

Ce rapport présente les statistiques des naissances, des décès et des mariages de l'année 1925, pour les huit provinces—Ile du Prince-Edouard, Nouvelle-Ecosse, Nouveau-Brunswick, Ontario, Manitoba, Saskatchewan, Alberta et Colombie Britannique—coopérant avec le Bureau Fédéral de la Statistique à cet égard. Ces huit provinces réunies forment ce qu'on appellera au cours de ce rapport "le territoire d'enregistrement." La province de Québec s'y ajoutera dès le prochain rapport.

La population de ces huit provinces, individuellement considérées en les années 1921-1925, fait l'objet du tableau I. Les chiffres de l'année 1921 sont ceux du recensement effectué cette année-là; ceux des années suivantes sont estimatifs.

TABLEAU I.—POPULATION PAR PROVINCES, 1921-25

Provinces	1921 (Recensement)	1922 (Estimative)	1923 (Estimative)	1924 (Estimative)	1925 (Estimative)
Ile du Prince-Edouard	88,615	88,000	88,000	88,000	87,000
Nouvelle-Ecosse	523,837	528,000	530,000	534,000	537,000
Nouveau-Brunswick	(1) 379,904	392,000	396,000	399,000	403,000
Ontario	2,933,662	2,981.000	3,019,000	3,062,000	3,103,000
Manitoba	610,118	616,000	621,000	627,000	633,000
Saskatchewan	757,510	771,000	783,000	797,000	810,000
Alberta	588,454	592,000	596,000	599,000	603,000
Colombie Britannique	524,582	539,000	544,000	553,000	561,000
Territoire d'enregistrement	**6,406,682**	**6,507,000**	**6,577,000**	**6,659,000**	**6,737,000**

(1) Les statistiques vitales du comté de Kent, N.-B., n'existent que depuis le premier mai 1921. On a donc dû exclure de ce tableau un tiers de sa population en 1921.

Le tableau II indique le nombre des naissances, des décès et des mariages enregistrés dans chaque province en l'année 1925. Il est établi une distinction entre la population rurale et la population urbaine, la population urbaine étant celle des cités et des villes ayant une population d'au moins 1,000 âmes; partout ailleurs, la population est considérée comme rurale.

TABLEAU II.—NAISSANCES, DÉCÈS ET MARIAGES PAR PROVINCES, 1925

Provinces	Naissances	Décès	Mariages	Provinces	Naissances	Décès	Mariages
Canada (territoire d'enregistrement)	**154,861**	**66,477**	**47,217**	Manitoba	14,867	5,245	4,377
Ruraux	**79,011**	**31,290**	**14,789**	Ruraux	8,035	2,476	1,499
Urbains	**75,850**	**35,187**	**32,428**	Urbains	6,832	2,769	2,878
Ile du Prince-Edouard	1,675	997	407	Saskatchewan	20,582	5,628	4,909
Ruraux	1,366	696	227	Ruraux	16,384	3,940	2,603
Urbains	309	301	180	Urbains	4,198	1,688	2,306
Nouvelle-Ecosse	11,400	6,045	2,964				
Ruraux	5,906	3,295	936	Alberta	14,924	4,697	4,355
Urbains	5,494	2,750	2,028	Ruraux	8,690	2,521	1,515
Nouveau-Brunswick	10,949	4,960	2,908	Urbains	6,234	2,176	2,840
Ruraux	7,442	3,095	1,411				
Urbains	3,507	1,865	1,497	Colombie Britannique	10,342	4,945	4,223
Ontario	70,122	33,960	23,074	Ruraux	3,310	1,777	765
Ruraux	27,878	13,490	5,833	Urbains	7,032	3,168	3,458
Urbains	42,244	20,470	17,241				

Accroissement naturel.—L'accroissement net de la population de ces huit provinces par l'excédent des naissances sur les décès, en 1925, fut de 88,384 âmes, comparativement à 91,398 en 1924, 86,715 en 1923, 95,166 en 1922 et 101,257 en 1921. Au cours de l'année 1925 on a constaté la naissance de 79,734 garçons et 75,127 filles formant un total de 154,861 naissances pour les deux sexes; durant la même période les décès se sont élevés à 66,477, dont 35,681 chez la population masculine et 30,796 chez la population féminine. Par conséquent, la population masculine du territoire d'enregistrement s'est accrue de 44,053 âmes et la population féminine de 44,331 âmes par le moyen de l'accroissement naturel, en 1925; l'accroissement de la population féminine fut donc supérieur de 278 unités à celui de la population masculine; en 1924 cet avantage avait été de 612 âmes.

TABLEAU III.—EXCÉDENT DES NAISSANCES SUR LES DÉCÈS, PAR PROVINCES, POUR CHAQUE SEXE, 1921-25

Provinces		Population masculine			Population féminine			Deux sexes	Population recensement de 1921, estimative 1922–25	Taux de l'accroissement naturel par 1,000 personnes

NAISSANCES

En 1925, on constata officiellement 158,200 accouchements dans le territoire d'enregistrement (au lieu de 161,140 en 1924), dont 156,262 d'un seul enfant, 1,919 de deux enfants et 19 de trois enfants. En définitive, il y eut 154,861 naissances d'enfant vivants et 5,296 mort-nés. Les accouchements simples ont contribué aux naissances d'enfants vivants à concurrence de 151,269, les accouchements doubles, à concurrence de 3,547 et les triples de 45.

Le tableau 6 des tableaux d'ensemble relève tous ces détails, et indique le sexe des enfants nés, soit vivants, soit morts, de ces différents accouchements.

Taux de la natalité.—Le taux brut de la natalité (naissances vivantes) par 1,000 personnes, s'établit en 1925 à 23·0, comparativement à 23·7 en 1924, 23·9 en 1923, 25·2 en 1922 et 26·4 en 1921. Le coefficient le plus élevé, 27·2, appartient au Nouveau-Brunswick et le plus bas, 18·4, se trouve dans la Colombie Britannique.

On trouvera dans le tableau IV le nombre des naissances et le taux de la natalité de chaque province en les années 1921-1925.

(1) Population blanche.

Masculinité.—On trouvera dans le tableau VI, pour chacune des provinces, la répartition numérique et proportionnelle des naissances vivantes selon le sexe, en chacune des années 1921-1925, ces deux années inclusivement, ainsi que le nombre des naissances masculines par 1,000 naissances féminines. En chacune de ces années, on trouve dans chaque province un excédent de naissances masculines sur les naissances féminines, hormis l'île du Prince-Edouard où, en 1921, 1923 et 1924, les naissances féminines ont prédominé. Il peut être intéressant de faire remarquer qu'aux Etats-Unis, durant les dix années 1915-1924, parmi la population de race blanche des états soumis aux statistiques vitales, il est né entre 1,055 et 1,059 garçons par 1,000 filles.

Dans l'Angleterre et le pays de Galles où les naissances sont exactement enregistrées depuis fort longtemps, on trouve une excellente démonstration de la variation de la masculinité des naissances d'enfants vivants au sein d'une nombreuse population. Durant les cinquante années écoulées entre 1871 et 1920, la proportion des naissances masculines par rapport aux naissances féminines oscilla entre 1,032 en 1898 et 1,060 en 1919; avant la grande guerre, la proportion la plus élevée avait été de 1,043 en 1875. Plus tard, on compta 1,051 naissances masculines pour 1,000 féminines en 1921, en 1922 1,049, en 1923 1,044, en 1924 1,047 et en 1925 1,045.

TABLEAU VI.—NAISSANCES (À L'EXCLUSION DES MORT-NÉS) PAR SEXE, ET PROPORTION DES GARÇONS COMPARATIVEMENT AUX FILLES, 1921-25

Provinces		Total des naissances	Garçons		Filles		Garçons par 1,000 filles

Décembre	11,927	129	831	825	5,355	1,164	1,618	1,203	802
Année	**154,861**	**1,675**	**11,400**	**10,949**	**70,122**	**14,867**	**20,582**	**14,924**	**10,342**

Les chiffres du tableau précédent étant, dans une certaine mesure, affectés par le nombre des jours contenus dans chaque mois, on a relevé le nombre des naissances quotidiennes en chaque mois; cette computation fait l'objet du tableau VIII. Dans l'ensemble du territoire d'enregistrement, le plus grand nombre des naissances se place au mois de mars, soit 457 par jour; au contraire, c'est en décembre qu'il y en a le moins, soit 385 par jour. Ces deux mois occupent la même position relative depuis 1923, date du début de ces statistiques. Le premier de ces mois correspond au mois de juin, saison où les mariages sont le plus nombreux et le dernier correspond à mars, mois où l'on se marie le moins.

La primauté du mois de mars s'exerce à cet égard, non seulement dans l'ensemble du territoire d'enregistrement mais aussi dans les provinces de l'île du Prince-Edouard, d'Ontario, de la Saskatchewan et de la Colombie Britannique; mais dans la Nouvelle-Ecosse, le Nouveau-Brunswick et l'Alberta, c'est avril qui est le mois dominant et au Manitoba c'est juin. La plus basse moyenne quotidienne se remarque soit en novembre, soit en décembre dans chaque province, sauf l'Alberta où elle se produit en octobre.

TABLEAU VIII.—MOYENNE QUOTIDIENNE DES NAISSANCES EN CHAQUE MOIS, PAR PROVINCES, 1925

Mois	Territoire d'enregistrement	I.P.-É.	N.-É.	N.-B.	Ont.	Man.	Sask.	Alta.	C.B.

Dans le but d'exposer plus clairement la relation existant entre la moyenne quotidienne des naissances de chaque mois et celle de l'année entière, le tableau IX relève les naissances quotidiennes pour l'année entière représentée comme 100 p.c. En mettant en parallèle ce tableau et le tableau LIV on verra que la répartition des naissances au cours de l'année est beaucoup plus égale que celle des mariages.

TABLEAU IX.—INDICE DES NAISSANCES QUOTIDIENNES PAR MOIS, 1925 (100 REPRÉSENTE LA MOYENNE QUOTIDIENNE POUR L'ANNÉE ENTIÈRE)

Mois	Territoire d'enregistrement	I.P.-É.	N.-É.	N.-B.	Ont.	Man.	Sask.	Alta.	C.B.

Âge des pères et mères.—Le tableau X est un relevé numérique et proportionnel des naissances d'enfants vivants et légitimes selon l'âge de leurs père et mère. En 1925, il est arrivé neuf fois dans le territoire d'enregistrement que les mères étaient âgées de moins de 15 ans. Près de 30 p.c. des mères, dont on connaît l'âge en 1925, avaient moins de 25 ans, tandis que 10·4 p.c. seulement des pères se plaçaient dans ce même groupe. Environ 6 p.c. des naissances déclarées étaient attribuables aux mères de 40 ans et plus, tandis que les pères de cet âge représentent près de 22 p.c. En jetant un coup d'œil sur les années précédentes on remarque que ces chiffres sont typiques. Tandis qu'en 1921 les déclarations de naissance restaient muettes sur l'âge de 11·6 p.c. des mères, en 1925 cette omission ne portait que sur quatre dixièmes de un pour cent de l'ensemble des naissances légitimes; quant aux pères, l'amélioration s'est produite dans la même proportion que pour les mères.

TABLEAU X.—NAISSANCES D'ENFANTS LÉGITIMES (À L'EXCLUSION DES MORT-NÉS) CLASSIFIÉES SELON L'ÂGE DES PÈRES ET MÈRES, 1921-25

Pères et mères		Groupes d'âges								Total, ages connus	Ages inconnus	Total

(1) Moins d'un dixième d'un pour cent.

Le tableau XI présente un autre aspect du groupement des âges des parents légitimes en les années 1923-25. Pour chaque année les pères et les mères sont groupés selon leur âge, puis répartis entre quatre groupes égaux dont le point de contact est appelé quartile. On présume que les pères et mères de même âge sont également distribués depuis le bas jusqu'au sommet de cette échelle. Similairement, les déciles partagent les pères et mères en dix groupes égaux.

Un quart des hommes mariés devenus pères en 1925 avaient moins de 28·48 ans; une moitié, moins de 33·49 ans et trois quarts moins de 39·17 ans; un quart des mères mariées n'avaient pas encore atteint 24·19 ans, une moitié avaient moins de 28·68 ans et trois quarts moins de 34·03 ans. Neuf dixièmes des pères étaient au-dessous de 44·35 ans et neuf dixièmes des mères au-dessous de 38·47 ans.

TABLEAU XI.—ÂGE DES PÈRES ET MÈRES LÉGITIMES, GROUPÉS PAR QUARTILES ET DÉCILES, 1923–25

Lieu de naissance des parents.—Le tableau XII distingue les naissances légitimes survenues dans chaque province en 1925, selon le lieu de naissance de la mère. La forte proportion des mères régnicoles que l'on remarque dans les provinces maritimes forme un contraste frappant avec ce que l'on voit dans les quatre provinces de l'ouest, particulièrement dans l'Alberta, où les mères régnicoles ne constituent qu'un peu plus d'un tiers de la masse. Dans l'ensemble du territoire d'enregistrement, la proportion des mères régnicoles s'est légèrement accrue chaque année, de 1922 à 1925.

TABLEAU XII.—POURCENTAGE DES ENFANTS LÉGITIMES, NÉS VIVANTS, DONT LES MÈRES SONT NÉES AU CANADA, DANS LES AUTRES PARTIES DE L'EMPIRE BRITANNIQUE OU À L'ÉTRANGER, PAR PROVINCES, 1925

Provinces	Pourcentage des naissances, par pays d'origine de la mère			
	Total	Née au Canada	Née dans l'empire britannique	Née à l'étranger
Ile du Prince-Edouard	100·0	94·8	2·2	3·0
Nouvelle-Ecosse	100·0	85·4	10·8	3·8
Nouveau-Brunswick	100·0	91·8	3·7	4·4
Ontario	100·0	68·2	21·3	10·5
Manitoba	100·0	49·0	20·1	30·9
Saskatchewan	100·0	40·8	16·2	43·0
Alberta	100·0	34·5	21·0	44·4
Colombie Britannique	100·0	37·1	37·4	25·4
Total, 1925	**100·0**	**60·6**	**19·3**	**20·1**
1924	**100·0**	**60·0**	**19·7**	**20·4**
1923	**100·0**	**59·2**	**20·4**	**20·3**
1922	**100·0**	**58·2**	**21·2**	**20·6**

Le tableau XIII, qui classifie les enfants nés en 1925 et 1924 selon le lieu de naissance de leurs parents, nous fait connaître dans quelle mesure la génération qui pousse sera le produit de parents autochtones, de parents allogènes ou de race britannique. Le mot "inconnu" dans la colonne indiquant le pays d'origine, quand il s'agit du père s'applique aussi bien aux naissances illégitimes qu'au manque de renseignements, mais quand il s'agit de la mère il ne faut accuser que l'absence d'information. On remarquera que 57·1 p.c. des enfants nés en 1925 descendaient d'un père régnicole, que 60·7 p.c. avaient une mère née au Canada; enfin que 48·1 p.c. étaient le fruit de mariages entre père et mère régnicoles. En fait, près de 70 p.c. des enfants descendaient soit d'un père, soit d'une mère régnicole.

(1) Comprend la Galicie.

(2) Moins d'un dixième d'un pour cent.

(3) Ce chiffre représente pour 1925 le nombre des enfants dont le père et la mère sont nés dans le même pays. La différence entre ce chiffre (108,642) et le total des naissances (154,861) égale le nombre d'enfants (46,219) dont le père et la mère sont dans des catégories différentes.

(4) A l'exclusion du pourcentage (29·8) représenté par les enfants dont le père et la mère sont dans des catégories différentes.

(5) Même explication que dans la note (3) mais se rapportant aux chiffres de 1924.

(6) Même explication que dans la note (4) mais se rapportant aux chiffres de 1924.

Origine raciale des pères et mères.—On verra par le tableau XIV le nombre et la proportion des naissances appartenant aux principaux groupes de races. Il est évidemment utile de savoir dans quelle mesure chaque race contribue au peuplement du Canada; d'autre part, il est intéressant de constater dans quelle mesure les gens de même souche ethnique se mélangent aux autres souches. L'absence d'informations de cette nature dans les documents officiels devient de plus en plus rare; en 1925, l'origine de la mère n'est restée inconnue que dans six dixièmes de un pour cent des naissances, au lieu de neuf dixièmes de un pour cent en 1924. A remarquer que les naissances d'enfants naturels s'ajoutent aux cas où l'origine du père est inconnue.

TABLEAU XIV.—NOMBRE ET PROPORTION DES NAISSANCES (MORT-NÉS EXCLUS) SELON L'ORIGINE RACIALE DES PÈRE ET MÈRE, 1925 ET 1924

Origine raciale des père et mère	Nombre de nouveau-nés dont le père ou la mère, ou l'un et l'autre appartiennent aux origines ci-après						Pourcentage des nouveau-nés dont le père ou la mère, ou l'un et l'autre appartiennent aux origines ci-après

(1) Comprend "Galicienne".
(2) Moins d'un dixième d'un pour cent.
(3) Ce chiffre représente pour 1925 le nombre des enfants dont le père et la mère ont la même origine raciale. La différence entre ce chiffre (101,898) et le total des naissances (154,861) égale le nombre d'enfants (52,963) dont le père et la mère sont dans des catégories différentes.
(4) A l'exclusion du pourcentage (34·2) représenté par les enfants dont le père et la mère sont dans des catégories différentes.
(5) Même explication que dans la note (3) mais se rapportant aux chiffres de 1924.
(6) Même explication que dans la note (4) mais se rapportant aux chiffres de 1924.

Enfants illégitimes.—Le tableau XV est consacré aux enfants illégitimes; il les classifie selon l'âge de leur mère, dans chaque province, puis établit une comparaison avec les années 1921 à 1924 quant au nombre des naissances illégitimes et leur proportion de l'ensemble des enfants nés vivants. En 1925 environ 42 p.c. des mères non mariées avaient moins de 20 ans; en 1924 et 1923 il y en avait 40 p.c.; en 1922, 38 p.c. et en 1921, 33 p.c. En outre on comptait 49 enfants illégitimes nés de mères âgées de moins de 15 ans, au lieu de 36 en 1924 et 45 en 1923.

On a relevé dans l'état qui suit la proportion des mort-nés par rapport aux naissances vivantes de 1925, pour certains groupes d'âges de mères mariées; quant aux mères d'âge inconnu, dont le nombre figure aux tableaux X et XVII, on a distribué ces naissances au pro rata. Le pourcentage des mort-nés, qui est le plus bas chez les mères de 20 à 24 ans, s'élève graduellement de groupe en groupe chez les mères plus âgées, résultat qui confirme les chiffres des années précédentes.

Groupes d'âges des mères	Nombre de naissances vivantes	Nombre de mort-nés	Mort-nés par 100 naissances vivantes
15–19 ans	8,536	254	3·0
20–24 "	35,840	908	2·5
25–29 "	41,503	1,183	2·9
30–34 "	32,742	1,131	3·5
35–39 "	22,813	1,055	4·6
40–44 "	8,499	4 80	5·6
45 ans et plus	867	65	7·5

Le tableau XVIII est consacré à la répartition des mort-nés dans chaque province, par sexe et par mois de naissance, en 1925; on y remarque que la proportion des garçons par rapport aux filles est beaucoup plus élevée que dans les naissances d'enfants vivants.

MORTALITÉ INFANTILE

Le taux de la mortalité chez les enfants de moins d'un an est basé sur le nombre des naissances déclarées durant l'année qui nous occupe, à l'exclusion des mort-nés. En 1925 les enfants de cet âge décédés dans le territoire d'enregistrement furent au nombre de 12,169, soit 78·6 par 1,000 naissances, au lieu de 78·5 en 1924, 88·1 en 1923, 86·8 en 1922 et 88·1 en 1921. On voit donc que la décroissance de la mortalité infantile déjà constatée en 1924, par rapport aux trois années précédentes, s'est continuée en 1925.

TAUX DE LA MORTALITÉ INFANTILE DANS LE TERRITOIRE D'ENREGISTREMENT

DÉCÈS AU-DESSOUS D'UN AN, PAR 1,000 NAISSANCES VIVANTES, 1921-25

Mortalité infantile, par sexe.—Il appert des chiffres du tableau XIX que, pour l'ensemble des huit provinces, la mortalité infantile des garçons a excédé de 20 à près de 30 p.c. celle de filles. En 1925, les naissances masculines ont dépassé les naissances féminines de 4,607; cependant, la mortalité plus intense chez les garçons que chez les filles réduisit cet avantage à la fin de l'année à 2,952 unités.

TABLEAU XIX.—NOMBRE ET PROPORTION DE LA MORTALITÉ INFANTILE PAR RAPPORT AUX NAISSANCES D'ENFANTS VIVANTS ET PAR SEXE, 1921-25

Année de naissance et âge au décès.—Quoique les chiffres de la mortalité infantile relevés dans le tableau XIX soient basés sur les naissances et les décès enregistrés en 1925, il est évident qu'un certain nombre de ces décès s'appliquent à des enfants nés en 1924, quoique ayant vécu moins d'un an. On constate en effet que les cas de cette nature étaient au nombre de 2,535 ou 20·8 p.c. du total des décès d'enfants durant l'année, laissant 9,634 ou 79·2 p.c. du total de ces enfants nés en 1925 (tableau XXIII). Les mêmes pourcentages ont été relevés en 1924, mais en 1923 ils étaient de 23·8 et 76·2. Le petit nombre des enfants de cet âge nés en une certaine année et décédés l'année suivante permet de conclure que le taux de la mortalité infantile basé sur la relation entre les décès d'une année quelconque et les naissances de la même année présente un tableau assez exact de la réalité et que ces chiffres peuvent se comparer avec ceux des années précédentes, sauf pour le cas exceptionnel où un grand changement se produirait dans le nombre des naissances d'une année à l'autre.

Le tableau XX, qui répartit par provinces les décès des nouveau-nés en 1925, selon la durée de leur brève existence, nous montre que plus que la moitié d'entre eux n'avaient pas encore un

mois et que 37 p.c. sont morts dans la première semaine de leur naissance. Cette lourde mortalité parmi les nouveau-nés explique la grande prépondérance des décès d'enfants dont la naissance et la mort se sont produites durant la même année.

Mortalité infantile dans d'autres pays.—Le tableau XXI établit un parallèle entre les huit provinces canadiennes qui nous occupent et certains autres pays, au regard des décès d'enfants de moins d'un an, mais les chiffres de plusieurs de ces pays ne sont que préliminaires. On y voit que dans chacun de ces pays établissant une distinction entre les deux sexes, la mortalité infantile est plus forte chez les garçons que chez les filles.

Le tableau XXIII classifie les décès d'enfants de moins d'un an survenus en 1925, selon le mois de la naissance et le mois du décès, que ces mois appartiennent à 1924 ou à 1925. Verticalement les chiffres indiquent le nombre total des décès de jeunes enfants survenus en chaque mois; horizontalement, ils donnent le nombre des enfants décédés qui étaient nés en un certain mois. Par exemple, 65 des enfants nés en mars 1924 sont morts en 1925 avant d'avoir atteint leur premier anniversaire, soit 27 en janvier, 26 en février et 12 en mars 1925. En lisant les chiffres diagonalement, de l'angle supérieur gauche à l'angle inférieur droit, on trouve le nombre des enfants décédés en 1925, dans le mois de leur naissance, dans le mois suivant, etc. L'addition diagonale de la dernière série de chiffres (depuis 439 jusqu'à 410) nous indique qu'en 1925 les enfants morts dans le mois de leur naissance étaient au nombre de 5,090, soit 41·8 p.c. du total des enfants de moins d'un an décédés durant l'année. On obtient le nombre des enfants décédés dans leur second mois en additionnant diagonalement la série de chiffres placés immédiatement au-dessus de ceux dont nous venons de parler (depuis 155 jusqu'à 136), c'est-à-dire 1,759 ou 14·5 p.c. de tous les décès de l'année. Quant aux autres, ceux décédés en 1925 durant un mois qui n'était ni celui de leur naissance ni le mois suivant, ils étaient au nombre de 5,320, soit 43·7 p.c. de tous les décès d'enfants déclarés en 1925.

Le tableau XXIV divise la mortalité infantile de chaque mois entre ces trois catégories, chacune d'elles étant computée sur un dénominateur approprié. On peut donc aisément comparer pour l'année 1925: (a) la mortalité des enfants nés durant le mois de leur décès; (b) la mortalité des enfants nés durant le mois précédant leur décès et (c) la mortalité des enfants de moins d'un an nés antérieurement au mois précédant leur décès.

Dans le taux de mortalité des enfants nés antérieurement au mois précédant leur décès, la longueur de chaque mois a été uniformisée à 30·4 jours. On n'a pas procédé à cet ajustement en calculant les taux des autres catégories, parce que dans ces cas, étant donné la concentration des décès pendant la première semaine de l'existence, la variation de la longueur des mois ne constitue qu'une différence insignifiante.

Les indices qui accompagnent ce tableau nous montrent comment le taux d'un mois quelconque se compare avec la moyenne des douze mois. Exprimé sous cette forme, le coefficient de mortalité des enfants nés durant le mois de leur décès varie de 82 en août à 112 en février et mai; le coefficient de mortalité des enfants nés durant le mois précédant leur décès varie de 72 en août à 129 en mars; enfin, le coefficient de la mortalité du surplus des enfants oscille entre

57 en juillet et 178 en septembre. Le fait que les déviations du coefficient de mortalité sont moins fortes chez les enfants décédés durant le mois de leur naissance s'explique lorsque l'on considère qu'une grande partie des décès se produisant dans les premières semaines ont une cause soit antérieure à la naissance, soit résultant de l'accouchement.

Février, mars et avril ont un indice supérieur à la moyenne de chacune des trois catégories. L'indice de juillet est constamment inférieur à cette moyenne.

La forte mortalité constatée en août, septembre et octobre—septembre tout particulièrement—chez les enfants, nés antérieurement au mois précédant leur décès, est vraisemblablement causée par la plus grande fréquence en ces mois des maladies gastro-instestinales.

En vue d'unifier le taux mensuel de la mortalité infantile on a combiné ces trois coefficients, en présumant un nombre égal de naissances en chaque mois. Sur cette base, septembre tenait la tête, avec un taux unifié de 101·5 par mille naissances vivantes, ce qui donne un indice de 130, comparativement à la moyenne. Juillet présente le taux le plus bas de l'année, soit 57·6 par mille naissances vivantes, avec un indice de 74. Les taux unifiés du tableau XXIV peuvent être considérés comme un rajustement des taux du tableau XXII établis plus simplement, mais moins exactement.

TABLEAU XXIV.—ANALYSE DE LA MORTALITÉ INFANTILE PAR MOIS, 1925

Mois	Mortalité des enfants nés et décédés durant le même mois			Mortalité des enfants nés durant le mois précédant leur décès			Mortalité des enfants de moins d'un an nés antérieurement au mois précédent				Taux [1] unifié par 1,000 naissances

Septembre	84	118	178	130
Octobre	99	99	127	111
Novembre	100	82	70	85
Décembre	105	102	84	95

Mortalité infantile, par trimestres.—Le tableau XXV relève le taux de la mortalité infantile en chacun des quatre trimestres des années 1924 et 1925. Le taux brut est obtenu en divisant le nombre des décès d'un trimestre par le nombre des naissances du même trimestre et

en multipliant par 1,000; quant au taux ajusté il est établi selon une méthode similaire à celle dont on s'est servi pour la computation du coefficient mensuel. On ne s'est pas préoccupé de la différence du nombre des jours constituant un trimestre, d'ailleurs sans grande importance. Cet ajustement a pour effet d'élever en chaque année le taux des deux premiers trimestres et d'abaisser celui du quatrième trimestre—d'une manière marquée en 1925—tandis que le troisième trimestre voit son indice à peine modifié.

Ce taux ajusté est de beaucoup le plus élevé pendant le premier trimestre en chaque année. La concordance entre le second trimestre et les troisième et quatrième est beaucoup plus favorable en 1925 qu'elle ne l'était en 1924.

TABLEAU XXV.—MORTALITÉ INFANTILE DANS LE TERRITOIRE D'ENREGISTREMENT, PAR TRIMESTRES, 1924 ET 1925

Trimestres	Nombre de naissances	Nombre de décès au-dessous d'un an	Taux de la mortalité infantile par 1,000 naissances vivantes	
			Brut	Ajusté
1924				
1er trimestre	39,968	3,402	85·1	86·7
2ième "	40,934	3,218	78·6	80·2
3ième "	39,444	2,952	74·8	74·7
4ième "	37,249	2,803	75·3	73·2
1925				
1er trimestre	38,903	3,262	83·8	84·1
2ième "	40,621	3,025	74·5	75·9
3ième "	39,433	3,039	77·1	77·1
4ième "	35,904	2,843	79·2	75·8

Mortalité des enfants nés durant l'année solaire 1924.—Une compilation du tableau XXIII opérée pour deux années successives nous permet de suivre les enfants nés en une certaine année ou en un certain mois pendant la première année de leur existence. Le tableau XXVI destiné à cet objet est consacré aux enfants nés durant l'année 1924. Chez ces enfants la mortalité au cours de leur première année fut de 78·3 par 1,000 naissances, comparativement à 83·5 chez les enfants nés durant l'année solaire 1923. Remarquons que les décès d'enfants nés en 1924 sont survenus tant en 1924 qu'en 1925. Le tableau permet quelques comparaisons importantes quant à la mortalité des enfants nés en certains mois. A coup sûr, pour être concluante cette comparaison devrait se poursuivre pendant un certain nombre d'années; d'autre part, il conviendrait de tenir compte des décès survenus dans la seconde année de l'existence.

[1] Obtenu par des calculs similaires en 1923.

Mortalité infantile, par causes.—Sur la totalité des enfants de moins d'un an décédés en 1925 dans le territoire d'enregistrement, 90·2 p.c. ont été victimes des maladies énumérées dans le tableau XXVII. Cette proportion avait été de 88·9 p.c. en 1924, 89·9 p.c. en 1923, 90·1 p.c. en 1922 et 88·0 p.c. en 1921. On ne constate pas de différence appréciable entre les sexes.

Sans doute les décès dus à ces causes seraient encore plus nombreux si l'on éliminait de la liste la rubrique "causes non spécifiées ou mal définies." Toutefois, étant donné que les décès ainsi classifiés dans les huit provinces ne représentaient que 5·7 p.c. de l'ensemble des décès d'enfants en 1921 et 3·3 p.c. en 1925, ils ne peuvent sérieusement affecter la comparaison d'une année à l'autre quant aux causes définies. D'ailleurs la proportion des décès dont les causes sont inconnues ou mal définies n'est appréciable qu'au Nouveau-Brunswick et dans l'île du Prince-Edouard; dans la première de ces provinces elle était de 33·5 p.c. en 1921 mais retombait à 18·1 p.c. en 1925 et dans la seconde, de 30·7 p.c. en 1922, mais ramenée à 9·5 p.c. en 1925. Les décès de l'île du Prince-Edouard étant peu nombreux, la proportion oscille considérablement; au Nouveau-Brunswick chaque année apporte une amélioration sur l'année précédente.

TABLEAU XXVII.—MORTALITÉ INFANTILE PAR CAUSES PRINCIPALES, 1921-25

Le coefficient de la mortalité infantile de 1925 étant sensiblement égal à celui de 1924 et l'un et l'autre notablement plus bas que ceux des trois années précédentes, il parait intéressant de comparer les décès des deux dernières années au regard de leurs causes principales. L'augmentation la plus forte entre 1924 et 1925 porte sur les maladies gastro-intestinales, augmentation qui interrompt une décroissance continue et marquée, commencée en 1921. La grippe, dont les effets avaient été plutôt bénins en 1924, devint plus redoutable l'année suivante. Les malformations congénitales qui suivent une courbe ascendante depuis 1921, ont continué à s'accroître, quoique légèrement, en 1925. La pneumonie dépassa légèrement les chiffres de 1924, mais demeura inférieure au niveau des années 1921-23. Par contre, la bronchite causa moins de décès en 1925 qu'en 1924.

Considérant collectivement toutes ces causes, on constate que le coefficient des décès dont elles furent l'auteur en 1925 dépassa de 3·4 celui de 1924, accroissement partiel contrebalancé par une accentuation de la décroissance constatée depuis 1921 de la mortalité attribuée à la débilité

congénitale, à la naissance prématurée et aux autres affections spéciales au premier âge, groupées sous le numéro 162. De plus, la rougeole fit peu de ravages en 1925, comparativement aux années antérieures depuis 1921. Un certain nombre de maladies moins importantes présentent des diminutions en 1925; enfin les maladies mal définies sont tombées à 2·6 par 1,000 naissances, comparativement à 3·2 en 1924.

Le tableau XXVIII, qui répartit par provinces la mortalité infantile selon ses causes les plus importantes en chacune des années 1921-25, indique le rôle joué par chaque province dans les fluctuations de l'ensemble.

Causes de la mortalité infantile, par sexe.—Le tableau XXVII nous a fait connaître les taux de certaines causes, avec distinction entre les sexes. Le tableau XXIX va nous montrer, pour les mêmes causes, le pourcentage des garçons par rapport aux filles. Cette comparaison est établie année par année depuis 1921 jusqu'à 1925; elle porte également sur la masse des décès de la période entière. La plupart des causes énumérées dénotent un avantage évident en faveur des filles, le taux pour les garçons variant en moyenne entre 120 et 130 p.c. de celui de l'autre sexe. Entre autres causes importantes la proportion des décès de garçons est particulièrement élevée pour les rubriques: conséquence de l'accouchement et convulsions. L'influenza dépasse sensiblement la moyenne. Par contre, la coqueluche a causé moins de décès chez les garçons que chez les filles, si ce n'est en 1922 où il y eut égalité. Les décès résultant de la rougeole ne présentent nul avantage appréciable en faveur de l'un des sexes sur l'autre.

TABLEAU XXIX.—COEFFICIENT DE LA MORTALITÉ INFANTILE DES GARÇONS COMPARATIVEMENT AUX FILLES DANS LE TERRITOIRE D'ENREGISTREMENT, CANADA, 1921-25

Causes de la mortalité infantile, par périodes d'âges.—Le tableau XXX présente les taux de la mortalité infantile résultant de certaines causes, par périodes d'âges, ces taux étant basés sur la masse des naissances et des décès des cinq années 1921-25. Les trois premiers mois de l'existence sont divisés en périodes mensuelles et la première semaine du premier mois est distinguée du surplus de ce mois; le reste de l'année est divisé en trimestres. Dans le but de permettre une comparaison équitable entre des périodes de longueurs différentes on a uniformisé les taux hebdomadaires; à cet effet, les taux bruts de la période "une semaine et moins d'un mois" ont été multipliés par 7/23·4, ceux de la période mensuelle par 7/30·4 et ceux du trimestre par 7/91·2. Ainsi réduits ces taux représentent la mortalité par 100,000 naissances vivantes durant une semaine moyenne des périodes les plus longues.

Il ne faut pas perdre de vue toutefois que la mortalité durant la première semaine de l'existence est loin de s'égaliser. En 1925, par exemple, les décès survenus pendant les premières vingt-quatre heures dépassèrent légèrement ceux du surplus de la première semaine. Pour certaines causes la proportion des décès survenus le premier jour fut la plus forte. Sur 2,266 enfants décédés avant d'avoir vécu une semaine, pour cause de naissance prématurée, 1,491 ont succombé durant les premières vingt-quatre heures. Une inégalité de distribution similaire, quoique beaucoup moins prononcée, caractérise les décès qui surviennent après la première semaine mais dans le cours du premier mois.

Le tableau fait ressortir la prédominance des décès résultant des causes n°s 159-162 durant la première semaine de l'existence, comparativement à toute autre période d'égale longueur. La pneumonie se déclare le plus souvent à cette période, quoique la différence entre le taux de la première semaine et ceux des autres périodes soit beaucoup moins marquée que dans le cas des causes précédentes. C'est durant la période "une semaine et moins d'un mois," que la diarrhée et l'entérite font le plus de ravages, mais les trois périodes suivantes ne s'en écartent guère.

TABLEAU XXX.—TAUX DE LA MORTALITÉ (ÉQUIVALENT HEBDOMADAIRE) PAR 100,000 NAISSANCES VIVANTES, CAUSÉE PAR CERTAINES MALADIES, PAR PÉRIODES D'ÂGE EMBRASSANT LA PREMIÈRE ANNÉE DE L'EXISTENCE, DURANT LES CINQ ANNÉES, 1921-25

(1) Ne comprend pas les chiffres de 1921.
(2) Comprend 71a en 1921.
(3) Moins de 0·1 par 100,000 naissances.

Mortalité infantile, par villes.—Le tableau XXXI nous renseigne sur les naissances vivantes, les décès des enfants de moins d'un an et le taux de la mortalité infantile dans les groupements urbains de 40,000 âmes et plus au cours des années 1921-25. En 1925, le taux de la mortalité infantile le plus élevé se trouve à St-John, N.-B., Ottawa venant ensuite et Halifax troisième. En chacune des années qui nous occupent, ces trois villes tiennent la tête, quoique leurs positions relatives varient.

Vancouver avait, et de beaucoup, le taux le plus bas en 1925, abaissant son propre record dont elle est en possession depuis 1921. En 1925 comme en 1924, Calgary se plaçait à cet égard immédiatement après Vancouver et London occupait la troisième place. Si l'on considère ces dix villes d'une façon globale, le taux de 1925, soit 76·4 par 1,000 naissances vivantes, était légèrement plus élevé que celui de 1924, c'est-à-dire 74·9. Ce dernier coefficient était l'indice d'une amélioration prononcée sur les trois années précédentes et c'est avec satisfaction que l'on constate qu'une notable partie de cette amélioration s'est maintenue.

En étudiant la statistique des naissances et de la mortalité infantile dans les groupements urbains, il ne faut pas perdre de vue qu'un certain nombre de femmes appartenant à la population rurale vont faire leurs couches dans les hôpitaux des villes.

NOTE.—Les cités sont classifiées selon leur population au recensement de 1921.

MORTALITÉ PUERPÉRALE

Dans le tableau XXXII, les décès de nature puerpérale sont classifiés par âge des défuntes et pour chacune des huit provinces depuis 1921, jusques et y compris 1925. En 1925 ces décès étaient au nombre de 873, soit à raison de 5·6 par 1,000 naissances vivantes, comparativement à 945 ou 6·0 par 1,000 naissances vivantes en 1924, 849 ou 5·4 par 1,000 en 1923, 907 ou 5·5 en 1922 et 868 ou 5·1 par 1,000 naissances vivantes en 1921. La comparaison du taux de 1925 avec celui des années précédentes est susceptible d'être affectée par l'amélioration constante des données concernant les décès des femmes d'âge fructifère.

*Dans ce total, figure une mère non mariée, de 14 ans.

En classifiant les enfants nés vivants en 1925 selon l'âge de leur mère et en opérant une répartition proportionnelle de ceux dont l'âge de la mère est resté inconnu, nous avons pu établir le parallèle consigné dans l'état qui suit. On y remarquera que les mères âgées de 20 à 24 ans sont celles qui paient le moindre tribut à la mortalité puerpérale. Entre 40 et 49 ans il y a trois fois plus de décès pour ces causes qu'entre 20 et 24 ans.

Groupes d'âges	Naissances vivantes 1925	Mortalité puerpérale 1925		Groupes d'âges	Naissances vivantes 1925	Mortalité puerpérale 1925	
		Décès	Taux par 1,000 naissances vivantes			Décès	Taux par 1,000 naissances vivantes
Moins de 20 ans	10,255	44	4·3	30–39 ans	55,944	382	6·8
20–24 ans	37,212	143	3·8	40–49 ans	9,414	122	13·0
25–29 ans	42,016	181	4·3	50 ans et plus	20	1	(1)

(1) Non computé.

Quoique le taux de la mortalité puerpérale ait été computé sur les naissances vivantes, il est évident que de nombreux décès classés sous cette rubrique ont eu pour cause soit un avortement, soit la naissance d'un enfant mort-né. Le tableau XXXIII présente le résultat d'une investigation en la matière. L'acte de décès de la mère ne spécifiant pas le résultat de l'accouchement, on a dû opérer des recherches parmi les documents consacrés aux mort-nés, recherches facilitées par leur petit nombre. Si nul acte de naissance n'était trouvé dans ce groupe, on a présumé que l'enfant était né vivant. Le nombre des avortements fut relevé dans les causes de décès portées aux actes mortuaires. Si cette méthode de computation des décès de nature puerpérale a produit quelque erreur, ce ne pourrait être qu'en accroissant le nombre de ces décès causés par des naissances d'enfants vivants, au détriment des deux autres catégories. Au total, il est né 154,861 enfants vivants, dont 546 ont coûté la vie à la mère, soit 3·5 par 1,000. Des mort-nés, au nombre de 5,296, 160 ont causé la mort de la mère, soit 30·2 par 1,000.

TABLEAU XXXIII.—DÉCÈS DE CAUSES PUERPÉRALES, CLASSIFIÉS SELON LA PRÉSENCE OU L'ABSENCE DU MÉDECIN, L'ÉTAT CONJUGAL ET LE FRUIT DE L'ACCOUCHEMENT

Provinces	Total	Soins médicaux		Etat conjugal		Fruit de l'accouchement mortel

On trouvera dans le tableau XXXV l'énumération d'un certain nombre de maladies indiquées comme causes de décès mais avec complications résultant de l'état puerpéral, et ce dans chacune des provinces en 1925. On y verra que les causes les plus fréquentes sont: la grippe, la pneumonie, la tuberculose et les affections du cœur.

MORTALITÉ (TOUTES CAUSES)

Les décès à tous âges constatés en 1925 dans le territoire d'enregistrement, dont la population est approximativement de 6,737,000 âmes, se sont élevés à 66,477, portant ainsi le taux brut de la mortalité à 9·9 par 1,000 personnes. Ce taux est exactement celui de 1924, mais en 1923 il était de 10·7 et en 1922 et 1921 de 10·6 par 1,000 âmes. On peut donc voir que le taux de la mortalité en 1924 et 1925 fut appréciablement inférieur à celui des trois années précédentes. Le tableau XXXVI est un relevé des décès en nombres absolus, avec accompagnement de leur coefficient dans chaque province, pendant les années 1921-1925. On remarquera qu'en chacune de ces années le coefficient individuel des quatre provinces de l'est dépasse la moyenne générale du territoire d'enregistrement, tandis qu'au contraire, celui des quatre provinces de l'ouest lui est inférieur. Cette différence est surtout attribuable à la situation avantageuse des provinces de l'ouest au regard de la composition de leur population selon l'âge. Suivant la courbe déjà accusée en 1924, les coefficients de 1925 sont meilleurs dans chaque province que ceux de 1923. Toute fois l'île du Prince-Edouard, Ontario et le Manitoba présentent en 1925 un taux de mortalité plus élevé que l'année précédente, quoique dans Ontario cette différence soit légère; le Nouveau-Brunswick s'est maintenu au même niveau et les autres provinces ont abaissé leur taux.

TAUX DE LA MORTALITÉ DANS LE TERRITOIRE D'ENREGISTREMENT

PAR 1,000 ÂMES, 1921-25

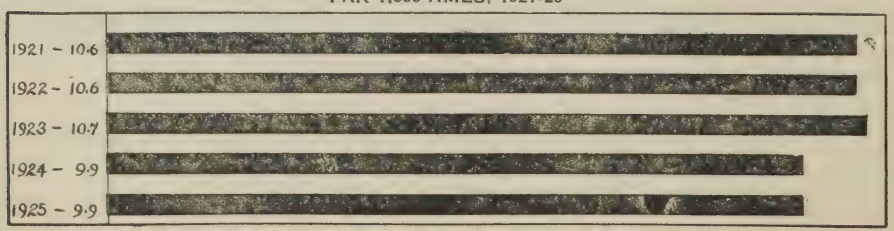

TABLEAU XXXVI.—NOMBRES ABSOLUS ET TAUX BRUTS DES DÉCÈS, (MORT-NÉS EXCLUS) PAR 1,000 ÂMES ET PAR PROVINCES, 1921-25

Provinces	Nombre à tous âges					Taux brut par 1,000 âmes

Taux brut de la mortalité dans d'autres pays.—Le tableau XXXVII compare le taux brut de la mortalité au Canada avec celui d'un certain nombre d'autres pays, dont les chiffres sont, dans quelques cas provisoires. On peut y voir qu'à cet égard le Canada est l'un des pays les plus favorisés dans le tableau. Les pays les plus nouveaux ont en général une population plus avantageusement composée que les vieux pays et ce fait contribue à l'abaissement relatif de leur mortalité. A remarquer que le taux du Canada a été calculé sur la totalité de la population des huit provinces, y compris les aborigènes.

TABLEAU XXXVII.—TAUX BRUT ANNUEL DE LA MORTALITÉ AU CANADA (TERRITOIRE D'ENREGISTREMENT) ET DANS CERTAINS AUTRES PAYS

[1] Population blanche.

Répartition des décès selon les âges.—Le tableau XXXVIII répartit les décès survenus en les années 1923-25, selon l'âge des défunts groupés par quartiles [1] et déciles [1], et cela tant pour chaque sexe individuellement que pour les deux sexes réunis. Le changement frappant entre 1923 et 1924, que l'on remarque dans la position du premier quartile, doit être attribué pour la plus grande partie au déclin de la mortalité infantile; quant à la persistance de ce changement entre 1924 et 1925, sans qu'elle eût comme corollaire un mouvement significatif soit de la mortalité infantile, soit de la mortalité générale, elle s'explique au moins partiellement par le plus petit nombre tant des naissances que des décès de nouveau-nés en 1925, contrastant avec l'accroissement des décès de tous âges marchant à la même allure que l'augmentation de la population.

[1] Le lecteur désirant une explication de ces termes la trouvera à la page lxxiv, accompagnant un tableau similaire consacré aux pères et mères des nouveau-nés.

TABLEAU XXXVIII.—ÂGES DES DÉCÉDÉS SELON LE SEXE, GROUPÉS PAR QUARTILES ET DÉCILES, 1923-25

Groupement fractionnaire		Les deux sexes			Masculin			Féminin		
		1923	1924	1925	1923	1924	1925	1923	1924	1925

Le tableau XXXIX répartit en groupes d'âges les défunts de l'un et l'autre sexe pour chaque année de la période 1921-25. Le tableau XL qui l'accompagne est consacré à la répartition proportionnelle des décès à ces âges ainsi groupés. Dans le premier de ces tableaux, la distinction est établie entre les sexes et dans le second les calculs d'abord les distinguent, puis les réunissent. On a également fait figurer dans ces tableaux les chiffres de la population dénombrée au recensement de 1921, répartie en groupes d'âges similaires, de manière à établir un parallèle entre la proportion des décès survenus dans un groupe d'âges et la proportion que représente ce groupe de la population totale. Ainsi, au recensement de 1921, les enfants âgés de moins d'un an ne constituaient que 2·3 p.c. de la population et cependant les décès à cet âge constatés en 1925 représentent 18·3 p.c. de la mortalité totale. Même observation pour les vieillards qui contribuent à la mortalité dans une proportion beaucoup plus forte que leur quote-part de la population en 1921.

TABLEAU XXXIX.—RÉPARTITION NUMÉRIQUE DES DÉCÈS DANS CERTAINS GROUPES D'ÂGES, 1921-25, ET RÉPARTITION NUMÉRIQUE DE LA POPULATION DES MÊMES ÂGES, D'APRÈS LE RECENSEMENT DE 1921.

Afin d'établir une comparaison de la répartition proportionnelle des décès par âges, pendant ces cinq années, on eut recours au groupement que l'on trouvera au tableau XL. Ce bref exposé démontre que la proportion des décès au-dessous d'un an par rapport à l'ensemble de la mortalité a décru d'année en année depuis 1921. Ceci s'explique partiellement d'une part par la décroissance de la natalité d'année en année, hormis 1924, et, d'autre part, par l'abaissement substantiel du taux de la mortalité infantile constaté en 1924, circonstances qui ont eu pour effet de réduire la proportion des décès chez les nourrissons. On remarque également une tendance à l'abaissement de la proportion des décès entre un et vingt ans et entre vingt et quarante ans, tandis qu'au contraire, les deux groupes les plus âgés voient leur proportion s'accroître d'année en année. Laissant de côté les améliorations survenues au-dessous d'un an et considérant seulement les autres décès divisés en deux groupes, le premier de un à quarante ans et le second au delà de quarante ans, on voit que les décès de ce dernier groupe représentaient 196 p.c. de ceux du premier groupe en 1921, 216 p.c. en 1922, 233 p.c. en 1923, 239 p.c. en 1924 et 258 p.c. en 1925.

Décès de centenaires.—Au cours de l'année 1925 on a déclaré 61 décès de centenaires ou réputés tels, soit 26 hommes et 35 femmes, comparativement à 59 en 1924, 65 en 1923, 63 en 1922 et 72 en 1921. L'état qui suit classifie ces décès par provinces et par âges. Cependant, il est impossible de garantir l'authenticité des âges donnés.

Taux spécifiques de la mortalité.—Eu égard au temps écoulé depuis le recensement de 1921 sur lequel repose la répartition de la population au regard de l'âge, on n'a pas jugé à propos de computer les taux de la mortalité par âges et par sexes pour 1925. Le quatrième rapport annuel indique ces taux pour 1921-24, calculés par groupes d'âges quinquennaux jusqu'à 25 ans et par groupes d'âges décennaux depuis 25 jusqu'à 75 ans, pour l'ensemble du territoire d'enregistrement. On trouvera dans le troisième rapport annuel des calculs similaires, par provinces, pour les années 1921, 1922 et 1923.

Taux ajustés de la mortalité.—Le cœfficient des décès des bébés et des vieillards est excessivement élevé si on le compare à celui des adolescents et des adultes. Il s'en suit que le taux brut de la mortalité d'une collectivité reflète non seulement l'influence des facteurs tels que le climat, la salubrité, le genre d'existence et l'hérédité, mais aussi les différences d'âge et de sexe dans la composition de la population et tout spécialement les anomalies de la relation entre les tout jeunes enfants ou bien les vieillards et la masse de la population.

En vue d'obtenir une comparaison entre les collectivités susceptibles d'éliminer l'effet des différences d'âge et de sexe, on se sert du taux ajusté ou standardisé. On y parvient en mettant en regard les taux de la mortalité du territoire qui nous occupe, compte tenu de l'âge et du sexe, et les taux d'une collectivité choisie comme standard. En d'autres termes, en calculant ce qu'aurait été le taux brut de la mortalité dans les pays qu'il s'agit de comparer si leur population était exactement constituée de la même manière quant aux sexes et à l'âge.

La population ayant servi de standard pour nos calculs est celle de l'Angleterre et du pays de Galles, dénombrée au recensement de 1901. Ce standard, utilisé dans les rapports du régistraire général de l'Angleterre et du pays de Galles, a été également adopté par le Bureau de recensement des Etats-Unis et le Bureau du Recensement et de la Statistique de l'Union Sud-Africaine, pour la computation de leur taux ajusté de la mortalité. A cette méthode on a donné le nom de "Million standard d'Angleterre et du pays de Galles, 1901."

En 1901, la population de l'Angleterre et du pays de Galles par chaque million d'âmes, se divisait, au point de vue du sexe et de l'âge, ainsi qu'il suit:—

Groupes d'âges	Deux sexes	Masculin	Féminin
Tous âges	**1,000,000**	**483,543**	**516,457**
Moins de 5 ans	114,262	57,039	57,223
5– 9 ans	107,209	53,462	53,747
10–14 "	102,735	51,370	51,365
15–19 "	99,796	49,420	50,376
20–24 "	95,946	45,273	50,673
25–34 "	161,579	76,425	85,154
35–44 "	122,849	59,394	63,455
45–54 "	89,222	42,924	46,298
55–64 "	59,741	27,913	31,828
65–74 "	33,080	14,691	18,389
75 ans et plus	13,581	5,632	7,949

La méthode ayant servi à l'ajustement des taux de la mortalité pour les années 1921-23 a été expliquée dans le troisième rapport annuel. Les taux ajustés de 1924 et 1925 sont basés sur les taux bruts, en présumant que la proportion entre les deux séries de taux n'a pas varié depuis 1921.

Il ne faut pas perdre de vue que le taux brut est un taux réel tandis que le taux "ajusté" n'est qu'hypothétique. Le seul objet de cet ajustement est de supprimer les inégalités dans les taux bruts dues aux différences d'âge et de sexe parmi la population constituant certaines collectivités. La valeur du taux "ajusté" se limite exclusivement à la comparaison car elle ne possède nulle signification particulière. Au point de vue de son sexe et de son âge, la population de l'Angleterre et du pays de Galles en 1901, était "exceptionnellement favorable à une basse mortalité", selon la propre expression du régistraire général. Le Canada, lui aussi, se trouve dans le même cas, notamment en raison du grand nombre de ses immigrants jeunes et robustes; cependant, après l'ajustement nécessaire, le taux de la mortalité du territoire d'enregistrement en 1925, qui était de 9·9 sous sa forme brute, descendit à 9·5 sous sa forme ajustée.

Les différences entre le taux brut et le taux ajusté que l'on constate dans le tableau XLI sont causées par les différences d'âge et de sexe de la population. Dans les provinces dont la population est plus avantageusement composée que celle du standard, le taux ajusté est plus haut que le taux brut; dans les autres provinces, c'est le contraire qui se produit.

Les chiffres qui suivent établissent une comparaison du taux ajusté de la mortalité dans le territoire d'enregistrement du Canada, en Angleterre et dans le pays de Galles, dans le territoire d'enregistrement des Etats-Unis et dans l'Union Sud-Africaine.

Pays	1921	1922	1923	1924	1925
Canada (territoire d'enregistrement)	10·2	10·2	10·3	9·5	9·5
Etats-Unis (territoire d'enregistrement)	10·7	10·9	11·3	10·6	10·7
Angleterre et pays de Galles	11·3	11·6	10·3	10·7	10·7
Union Sud-Africaine (population blanche)	11·4	10·4	10·7	10·4	–

Mortalité par mois.—Le tableau XLII est consacré à la mortalité par mois, dans chacune des huit provinces qui nous occupent, en les années 1921-25. On y remarquera que, quoique les taux annuels de 1924 et 1925 sont exactement semblables, cette similitude ne s'étend pas à chacun des mois de l'année; les premiers mois de 1925 sont avantagés à cet égard, mais cet avantage est exactement contrebalancé par un taux plus défavorable durant la dernière partie de l'année.

Les taux établis dans le tableau XLII ont été uniformisés sur une base annuelle, c'est-à-dire qu'avant de calculer le taux, les décès sont multipliés par 365 puis divisés par le nombre de jours de chaque mois.

TABLEAU XLII.—TAUX BRUT DE LA MORTALITÉ PAR 1,000 PERSONNES ET PAR MOIS, DANS LE TERRITOIRE D'ENREGISTREMENT, 1921-25

Décès dus à certaines causes.—Environ 87 p.c. de tous les décès dont on connaît la cause, survenus dans le territoire d'enregistrement, en 1925, sont attribués aux 30 causes de décès énumérées dans les tableaux XLIII à L. Cette proportion est à peu près semblable à celle des quatre années précédentes. Le tableau XLIII indique, par provinces, le nombre des décès revendiqués par chacune de ces causes en 1925, tandis que le tableau XLIV fournit une comparaison avec les années 1921-1924, pour l'ensemble du territoire d'enregistrement.

Les tableaux XLV et XLVI sont basés sur les chiffres absolus des deux tableaux précédents; on y trouve le coefficient, par 100,000 âmes, des décès causés par chacune des causes énumérées. Le tableau XLV se limite à l'année 1925 et indique le coefficient pour chaque province; le tableau XLVI présente une comparaison avec les années 1921-24 pour l'ensemble du territoire d'enregistrement.

Affections du cœur.—Les affections du cœur figurant à la Liste internationale sous les numéros 87-90, et considérées collectivement, contribuèrent plus que toutes autres causes à la mortalité dans le territoire d'enregistrement en 1925, comme en chacune des années précédentes depuis 1921; ses ravages amenèrent 7,587 décès, soit 113 par 100,000 âmes en 1925, au lieu de 108 par 100,000 âmes en 1924, 114 en 1923, 102 en 1922 et 94 en 1921. Les coefficients spéciaux aux provinces pour chacune des années 1921-25, sont relevés dans l'état qui suit. En établissant un parallèle entre chacune des provinces il ne faut pas perdre de vue les différences sensibles existant entre elles au regard de la composition de leur population selon l'âge.

AFFECTIONS DU CŒUR (Nos. 87-90)
(Mortalité par 100,000 âmes)

Provinces	1921	1922	1923	1924	1925
Territoire d'enregistrement	**94**	**102**	**114**	**108**	**113**
Ile du Prince-Edouard	108	131	142	142	122
Nouvelle-Ecosse	107	111	130	113	120
Nouveau-Brunswick	111	125	120	112	125
Ontario	116	126	145	137	142
Manitoba	70	72	79	79	74
Saskatchewan	45	48	48	47	50
Alberta	52	54	62	67	77
Colombie Britannique	90	101	108	99	104

Affections des artères.—La mortalité résultant de cette cause n'a pas cessé d'augmenter chaque année de 1921 à 1925, montant par bonds successifs de 40 à 56 par 100,000 âmes. L'artériosclérose est la cause de la presque totalité de ces décès.

Cancer.—Le cancer, sous chacune des différentes formes constituant les numéros 43-49 de la Liste internationale, occupait en 1925 le second rang, avec 5,526 décès dans le territoire d'enregistrement, soit à raison de 82 par 100,000 âmes, au lieu de 83 par 100,000 âmes en 1924, 78 en 1923, 79 en 1922 et 75 en 1921. Déjà en 1924 le cancer occupait le second rang, mais en les années 1921-1923 il cédait le pas à la pneumonie (numéros 100-101) et aux maladies du premier âge (numéros 160-163). Ce changement de position est partiellement attribuable à un accroissement du taux de la mortalité résultant du cancer, mais surtout à l'affaiblissement du taux de la mortalité causée par la pneumonie et les maladies du premier âge. On verra dans le tableau qui suit le taux par 100,000 âmes de la mortalité causée par le cancer dans les différentes provinces constituant le territoire d'enregistrement, au cours de la période 1921-25.

CANCER (Nos. 43-49)
(Mortalité par 100,000 âmes)

Provinces	1921	1922	1923	1924	1925
Territoire d'enregistrement	**75**	**79**	**78**	**83**	**82**
Ile du Prince-Edouard	87	97	94	101	100
Nouvelle-Ecosse	92	102	100	107	101
Nouveau-Brunswick	73	82	76	76	83
Ontario	88	88	90	96	95
Manitoba	70	72	67	74	71
Saskatchewan	41	45	46	44	44
Alberta	48	54	49	58	57
Colombie Britannique	74	83	83	83	84

Pour l'ensemble du territoire d'enregistrement, le coefficient, quoique légèrement plus bas en 1925 qu'en 1924, semble manifester une tendance vers l'accroissement de cette maladie entre 1921 et 1925, mais cette période est trop courte pour que l'on puisse en déduire des conclusions certaines. D'ailleurs, si quelques changements s'étaient produits depuis 1921 dans la répartition de la population, au regard de l'âge, cela provoquerait probablement l'élévation du taux brut. D'autre part, il faut également tenir compte de l'effet susceptible d'être causé par plus de précision dans les diagnostics d'année en année.

En chacune des années qui nous occupent, le taux de la mortalité par le cancer est plus élevé chez les femmes que chez les hommes. Les taux pour chaque sexe sont indiqués dans l'état qui suit, avec classification selon le site du cancer. On y verra que le cancer "d'autres organes ou d'organes non spécifiés" montre une tendance à décroître, particulièrement prononcée chez les femmes. Il est à présumer que cette décroissance appartient surtout aux "organes non spécifiés", amélioration qui serait le résultat direct d'une plus grande précision dans les certificats de décès. La pratique adoptée de renvoyer aux médecins les certificats défectueux amène nécessairement plus d'exactitude de leur part. Si l'on admet que cette décroissance s'applique aux "organes non spécifiés" et non pas aux "autres organes", cela implique comme corollaire un accroissement de cette maladie dans les autres sites ou tout au moins certains d'entre eux. Ceci est à considérer en établissant un parallèle entre les différents sites.

MORTALITÉ CAUSÉE PAR LE CANCER EN SES DIFFÉRENTS SITES
(par 100,000 âmes)

Sites du cancer	1921	1922	1923	1924	1925
SEXE MASCULIN					
Tous sites	**69**	**71**	**70**	**75**	**75**

Autres organes ou organes non spécifiés	18	16	14	13	11

Pneumonie.—La pneumonie, qui embrasse la broncho-pneumonie, la bronchite capillaire, la pneumonie lobaire et la pneumonie non autrement définie, occupait le troisième rang parmi les causes de décès en 1925, avec un taux de 76 pour 100,000 âmes, comparativement à 75 en 1924, 95 en 1923, 98 en 1922 et 93 en 1921. Le Nouveau-Brunswick est la seule province où la fréquence de cette maladie se soit accrue d'une manière sensible entre 1924 (89 par 100,000 âmes) et 1925 (112 par 100,000). On trouvera dans l'état qui suit les taux par provinces, entre 1921 et 1925.

PNEUMONIE (Nos. 100 et 101)
(Mortalité par 100,000 âmes)

Provinces	1921	1922	1923	1924	1925
Territoire d'enregistrement	**93**	**98**	**95**	**75**	**76**
Ile du Prince-Edouard	109	121	155	93	80
Nouvelle-Ecosse	96	126	127	96	96
Nouveau-Brunswick	132	123	114	89	112
Ontario	102	105	102	76	80
Manitoba	92	91	85	82	79
Saskatchewan	66	71	81	70	62
Alberta	76	77	74	67	62
Colombie Britannique	67	82	53	46	47

Bronchite.—De même que la pneumonie, la bronchite a légèrement varié en 1925 sur l'année précédente; son taux actuel est notablement inférieur à celui des années 1921-23.

Maladies du premier âge.—Ce groupe de causes (nos 160-163 de la liste internationale), qui occupait en 1925 le quatrième rang au regard de la mortalité, est traité sous la rubrique "mortalité infantile" (pages lxxxvii et suivantes).

Tuberculose.—Le taux de la mortalité par la tuberculose de l'appareil respiratoire était en 1925 de 56 par 100,000 âmes, c'est-à-dire légèrement inférieur à l'année précédente. Entre 1921 et 1925, le taux de la mortalité par la tuberculose de l'appareil respiratoire s'est abaissé de 61 à 56 par 100,000 âmes et des autres formes de la tuberculose de 14 à 11 par 100,000 âmes. Dans l'état qui suit on a relevé le taux des décès causés par toutes les formes de la tuberculose dans les provinces, entre 1921 et 1925.

TUBERCULOSE (Nos. 31-37)
(Mortalité par 100,000 âmes)

Provinces	1921	1922	1923	1924	1925
Territoire d'enregistrement	**75**	**73**	**73**	**70**	**67**
Ile du Prince-Edouard	144	127	106	114	99
Nouvelle-Ecosse	134	132	123	125	108
Nouveau-Brunswick	109	107	111	105	100
Ontario	71	66	66	60	59

Disséminée	78	65	81	60	74	72	66	59	51	59

Morts violentes.—Les suicides, au nombre de 586 en 1925, ont suivi une courbe ascendante depuis 1921. En voici le détail, par sexe:

SUICIDES
(Nombres absolus)

Sexe	1921	1922	1923	1924	1925
Masculin	342	376	404	399	466
Féminin	89	111	134	136	120

Les morts violentes autres que les suicides étaient en 1925 au nombre de 3,873, soit 57 par 100,000 âmes, ce qui diffère très peu du taux des quatre années précédentes; elles ont coûté la vie de 2,845 personnes du sexe masculin et 1,028 du sexe féminin. Les homicides, y compris ceux excusables, y figurent pour 98, dont 70 décès masculins et 28 décès féminins. Les accidents d'automobiles ont coûté la vie à 425 personnes, dont 302 du sexe masculin et 123 du sexe féminin. Nous donnons dans l'état suivant, par provinces, la liste des décès causés par les accidents d'automobiles pendant le quinquennat 1921-25. Ces chiffres englobent les décès résultant de collision d'automobiles avec d'autres véhicules, hippomobiles, tramways et trains.

DÉCÈS RÉSULTANT D'ACCIDENTS D'AUTOMOBILES
(Nombres absolus)

Provinces	1921	1922	1923	1924	1925
Territoire d'enregistrement	**197**	**237**	**355**	**340**	**425**
Ile du Prince-Edouard	–	1	2	1	2
Nouvelle-Ecosse	11	16	24	13	26
Nouveau-Brunswick	8	11	20	16	20
Ontario	108	103	208	205	256
Manitoba	9	25	18	17	32
Saskatchewan	9	20	19	16	18
Alberta	18	22	22	16	26
Colombie Britannique	34	39	42	56	45

Néphrite.—En 1925, la néphrite a causé 2,880 décès soit 43 par 100,000 âmes. En 1921, ce taux n'était que de 32 par 100,000 âmes, mais depuis cette date, la progression a été constante. L'augmentation s'est surtout manifestée dans la néphrite chronique (y compris la néphrite non spécifiée chez les personnes âgées de plus de 10 ans), dont le nombre a dépassé de beaucoup en chaque année les décès causés par la néphrite aiguë.

Hémorrhagie cérébrale, apoplexie.—Les décès de cette cause dont la proportion atteignait 34 par 100,000 âmes en 1925, étaient de 35 en 1924 et de 41 par 100,000 en 1921. Ce déclin peut être le corollaire de l'accroissement plus haut constaté des taux de la néphrite et des affections artérielles; en effet, les médecins s'habituent de plus en plus à indiquer la maladie originaire qui détermina l'hémorrhagie.

Diarrhée et entérite.—On a relevé 2,198 décès provenant de ces causes en 1925, soit à raison de 33 par 100,000 âmes. Ce taux qui dépasse de 5 par 100,000 âmes celui de l'année précédente est légèrement plus élevé qu'en 1923, mais il est considérablement inférieur aux chiffres de 1921 et 1922. Dans l'état qui suit, on a relevé les décès causés par la diarrhée et l'entérite, d'abord chez les enfants de moins de deux ans puis chez toutes les personnes âgées de plus de 2 ans, en chacune des années 1921-25.

DIARRHÉE ET ENTÉRITE
(Nombres absolus)

Année	Total	Au-dessous de 2 ans	2 ans et plus
1921	3,218	2,695	523
1922	2,843	2,440	403
1923	2,061	1,696	365
1924	1,891	1,555	336
1925	2,198	1,787	411

Grippe.—Les décès attribués à cette cause furent au nombre de 2,182 en 1925, soit 32 par 100,000 âmes. Il y en eut 20 par 100,000 en 1924, 54 en 1923, 37 en 1922 et 15 en 1921. L'état suivant relève le nombre absolu des décès par la grippe, en chacun des mois des années 1921-25.

DÉCÈS CAUSÉS PAR LA GRIPPE, PAR MOIS
(Nombres absolus)

Mois	1921	1922	1923	1924	1925
Janvier	85	193	298	107	192
Février	154	291	1,144	152	271
Mars	154	640	1,049	191	426

Décembre	63	105	63	138	137
Total	**940**	**2,400**	**3,578**	**1,306**	**2,182**

Dans le présent rapport, de même que dans le rapport qui l'a précédé, les décès attribués à la grippe ont été subdivisés selon une classification détaillée, en raison des complications qui l'accompagnaient ou qui en sont dérivées. A titre d'exemple, on peut consulter le tableau 26 des tableaux d'ensemble, page 146.

Maladies contagieuses.—Les cinq maladies contagieuses formant la tête de la liste des tableaux xliii-xlvi avaient, toutes ensemble, un taux de 29 décès par 100,000 âmes en 1925, sensiblement inférieur à celui des quatre années précédentes. La diphtérie, qui n'a pas cessé de décroître durant le quinquennat, a largement contribué à ce déclin, les décès de cette cause tombant à 615 en 1925, au lieu de 848 en 1924 et 1,297 en 1921. La coqueluche présente une légère augmentation sur 1924, quoique insuffisante à modifier le taux. Quant à la fièvre scarlatine, elle n'a causé en 1925 que 258 décès, au lieu de 329 en 1924, cette maladie marquant une décroissance considérable sur les quatre années précédentes. La mortalité causée par la rougeole fut remarquablement bénigne en 1925, les décès de cette cause s'étant limités à 171 au lieu de 483 l'année précédente; au cours du quinquennat le chiffre le plus bas avait été de 211 en 1922. La fièvre typhoïde qui causa 311 décès en 1925, dépassa quelque peu le taux de l'année précédente, qui était de 287; néanmoins, il reste considérablement inférieur aux taux de 1921 et 1923.

Proportion des décès par chaque cause.—Le tableau XLVII répartit le taux de la mortalité par 100,000 âmes en 1925 entre chacune des causes de décès énumérées et dans chaque province, tandis que le tableau XLVIII établit une comparaison sur la même base, avec les années 1921-24, pour l'ensemble du territoire d'enregistrement. Evidemment, les différentes causes de décès occupent dans ces tableaux le même rang que dans les tableaux XLV et XLVI.

TABLEAU XLVII.—PROPORTION DE CERTAINES CAUSES PAR 1,000 DÉCÈS DE CAUSES SPÉCIFIÉES, 1925

Répartition proportionnelle, selon leur cause, des décès de certains groupes d'âges—Le tableau XLIX attribue leur proportion relative aux décès dus à chacune des causes énumérées en 1925, par rapport à l'ensemble de la mortalité de chaque sexe, aux différentes phases de l'existence. Au-dessous de l'âge de 5 ans, les maladies du premier âge (Liste internationale nos 160-163) contribuent lourdement à la mortalité, c'est-à-dire pour presque un tiers des décès des filles et pour un peu plus d'un tiers des décès des garçons. Les décès de cette période sont également considérablement affectés par la pneumonie (nos. 100-101) et la diarrhée et entérite (nos 113 et 114). D'autre part, il convient de noter que 79·4 p.c. des décès de garçons et 76·6 p.c. des décès de filles de ce groupe d'âges se placent dans la première année de leur existence.

Dans le groupe de 5 à 14 ans, les décès résultant d'accidents (Liste internationale nos 175-203) auxquels s'ajoutent quelques homicides, contribuent à concurrence d'un quart aux décès masculins et d'un dixième aux décès féminins de causes spécifiées. La tuberculose sous toutes ses formes se place immédiatement après les accidents chez les garçons de ce groupe, sa part étant de 106.2 décès sur 1,000; puis la diphtérie occupe le troisième rang avec 105.5 décès. Chez les filles, la tuberculose prend la tête, causant 147.5 décès sur 1000 décès de causes spécifiées, suivie de la diphtérie, avec 123.5 par 1000 décès. Parmi les autres maladies qui contribuèrent d'une façon notable à la mortalité des enfants de 5 à 15 ans, les plus importantes furent l'appendicite, la pneumonie, les affections du cœur, la fièvre scarlatine et la grippe.

Dans le groupe d'âges de 15 à 29 ans, les morts violentes (suicide exclu) tiennent encore la tête quant aux décès masculins, avec plus d'un quart du nombre total des décès dont la cause est spécifiée. La tuberculose de l'appareil respiratoire revendique 228 décès par 1,000 chez les adolescents et adultes de cet âge et la tuberculose d'autres organes, 33 décès par 1,000, de telle sorte que la mortalité résultant de ces deux dernières causes est presque égale aux morts violentes; réunies, les morts violentes et la tuberculose constituent plus de la moitié des décès masculins dans ce groupe d'âges.

TABLEAU XLIX.—PROPORTION DE CERTAINES CAUSES, PAR 1,000 DÉCÈS DE CAUSES SPÉCIFIÉES, PAR SEXE ET PAR GROUPES D'ÂGES, 1925

Chez les filles et femmes de 15 à 30 ans la tuberculose de l'appareil respiratoire est de beaucoup la plus redoutable cause, ayant amené 321 décès sur 1,000 morts de toutes causes, les autres formes de la tuberculose ajoutant 44 autres décès par 1,000. Dans ce groupe d'âges, les décès de nature puerpérale sont au nombre de 143 sur 1,000.

Dans le groupe d'âges de 30 à 49 ans, chez le sexe masculin nulle cause ne domine manifestement; la tuberculose se classe en tête, avec 172 décès par 1,000 et les morts violentes occupent le second rang, avec 157 décès par 1,000. Les affections du cœur ont contribué aux décès, à concurrence de 95 par 1,000, le cancer 71 et la pneumonie 64·5. Quant aux suicides, ils figurent à concurrence de 40 décès par 1,000; c'est dans ce groupe que cette proportion est le plus élevée. Chez les femmes du même groupe d'âges, la tuberculose occupe le premier rang, avec 149 sur 1,000 décès de causes connues, dont 133 sont attribués à la tuberculose de l'appareil respiratoire et 16 à ses autres formes. Le cancer causa 147 décès et les maladies puerpérales 120·5 par 1,000. Si l'on divise en deux parties égales cette période d'âges on constate alors que, dans la première moitié, les maladies de nature puerpérale constituent 194·4 décès par 1,000 et le cancer 82·7 par 1,000 seulement des décès de causes connues, tandis que dans la seconde moitié les décès de nature puerpérale tombent à 55·1, mais le cancer s'élève à 203·3.

Après le cinquantième anniversaire, les affections du cœur sont la cause la plus importante des décès des deux sexes, sa part contributive atteignant 186·5 par 1,000 décès masculins et 185 par 1,000 décès féminins. Le cancer, les affections des artères, la pneumonie, la néphrite et l'hémorragie cérébrale ont aussi amené une forte proportion de décès. La sénilité fut la cause attribuée à 51 sur 1,000 décès masculins de ce groupe d'âges et 75 sur 1,000 décès féminins.

Répartition par groupes d'âges des décès dus à certaines causes.—Le tableau L est consacré à la répartition proportionnelle par groupes d'âges des décès de l'année 1925, selon les causes énumérées aux tableaux qui précèdent, à l'exception des maladies dont le nom suffit à préciser les victimes, telles que sénilité, affections du premier âge, etc.

TABLEAU L.—PROPORTION SELON LE SEXE DES DÉCÈS DANS CHAQUE GROUPE D'ÂGES, PAR 1,000 DÉCÈS À TOUS ÂGES, ET POUR CERTAINES CAUSES INDIVIDUELLES, 1925

MARIAGES

En 1925, il a été célébré dans l'étendue du territoire d'enregistrement 47,217 mariages, au lieu de 47,538 en 1924, 49,102 en 1923, 47,811 en 1922 et 51,073 en 1921. Il y eut donc une diminution de 321 mariages sur l'année 1924 et de 3,856 sur l'année 1921, qui en eut le plus durant le quinquennat. Toutes les provinces de l'ouest ont vu un plus grand nombre de mariages en 1925 qu'en 1924; par contre, les provinces maritimes subirent une légère décroissance, mais la province d'Ontario subit une diminution de près d'un millier de mariages, tombant de 24,038 en 1924 à 23,074 en 1925. Le taux de la nuptialité pour la totalité du territoire d'enregistrement fut en 1925 de 7·0 par 1,000 âmes, comparativement à 7·1 en 1924, 7·5 en 1923, 7·3 en 1922 et 8·0 en 1921. Les chiffres absolus et proportionnels pour chacune de ces années sont indiqués, par provinces, dans le tableau LI.

Répartition mensuelle des mariages.—On trouve dans le tableau LIII la répartition des mariages de 1925, par provinces et par mois; quant au tableau LIV il indique la moyenne du nombre des mariages par jour. Avec une moyenne de 191 mariages par jour, c'est le mois de juin qui prédomine dans le territoire d'enregistrement, mais si l'on examine la situation des provinces individuellement, la primauté de juin n'existe que dans Ontario et la Colombie Britannique; dans la Nouvelle-Ecosse, le Nouveau-Brunswick et le Manitoba ce mois se place au second rang. Septembre occupe la seconde place dans le territoire d'enregistrement avec 167 mariages quotidiens. Dans la Nouvelle-Ecosse et le Nouveau-Brunswick, septembre est le mois le plus favorable à l'hymen; dans l'île du Prince-Edouard, Ontario et la Colombie Britannique il est relégué au second rang. Novembre, troisième favori pour l'ensemble du territoire, vient en tête au Manitoba et dans la Saskatchewan, sa popularité étant particulièrement marquée dans la Saskatchewan. Dans l'ensemble du territoire, c'est le mois de mars qui présente la plus petite moyenne quotidienne des mariages; il se place d'ailleurs dernier dans la Nouvelle-Ecosse, le Nouveau-Brunswick, Ontario, le Manitoba et la Colombie Britannique. Immédiatement avant lui vient le mois de mai qui occupe l'avant-dernier rang pour l'ensemble du territoire et le dernier dans l'île du Prince-Edouard, la Saskatchewan et l'Alberta.

TABLEAU LIII.—RÉPARTITION DES MARIAGES DANS CHAQUE PROVINCE, PAR MOIS, 1925

Mois	Territoire d'enregistrement	I.P.-É.	N.-É.	N.-B.	Ont.	Man.	Sask.	Alta.	C.B.

Les chiffres du tableau LIV ont servi de base à un nombre-indice, la moyenne quotidienne pour l'année entière étant représentée par le nombre 100 dans le tableau LV. Cette modalité permet de se rendre compte plus aisément de l'écart entre les différents mois. C'est ainsi qu'on remarque que la moyenne quotidienne des mariages dans les huit provinces qui nous occupent est supérieure à la normale en juin, septembre, octobre, novembre et décembre, tandis que dans les sept autres mois elle lui est inférieure.

TABLEAU LV.—NOMBRE-INDICE DES MARIAGES QUOTIDIENS PAR MOIS, 1925

(100 représente la moyenne quotidienne des mariages au cours de l'année entière)

Mois	Territoire d'enregistrement	I.P.-É.	N.-É.	N.-B.	Ont.	Man.	Sask.	Alta.	C.B.

État civil des conjoints.—Sur 1,000 hommes ayant contracté mariage en 1925 on comptait 896·4 célibataires, 94·4 veufs et 9·2 divorcés, tandis que pour 1,000 de leurs compagnes on trouvait 917·3 célibataires, 73·6 veuves et 9·2 divorcées.

La répartition proportionnelle des mariages de 1925 selon l'état civil des conjoints, fait l'objet du tableau LVI. On a laissé de côté ce qui se rapporte aux divorcés, les mariages dans lesquels ceux-ci figurent ne représentant que 1·7 p.c. des mariages de l'année.

TABLEAU LVI.—RÉPARTITION PROPORTIONNELLE DES MARIAGES SELON L'ÉTAT CIVIL DES CONJOINTS, À L'EXCLUSION DES DIVORCÉS, PAR PROVINCE, 1925

Provinces	Total	Célibataires et		Veufs et

Le tableau LVIII nous indique l'âge des époux et des épouses groupés par quartiles [1] et déciles [1] en les années 1923, 1924 et 1925. Dans ces calculs on a présumé que les nouveaux époux d'un âge quelconque sont nés dans chacun des mois de l'année, en nombre égal.

[1] Le lecteur désirant une explication de ces termes la trouvera à la page lxxiv, accompagnant un tableau similaire consacré aux pères et mères des nouveau-nés.

TABLEAU LVIII.—ÂGES DES ÉPOUX ET ÉPOUSES GROUPÉS PAR QUARTILES ET DÉCILES, 1923-25

Groupement fractionnaire		Epoux			Epouses		
		1923	1924	1925	1923	1924	1925

Dans le tableau LIX les mariages ont été groupés d'abord selon l'âge des maris, puis selon l'âge des femmes. On remarquera que lorsque ce groupement est gouverné par l'âge des maris, la moyenne de la différence d'âge entre les époux est moindre pour les groupes plus jeunes que pour les plus âgés; en effet cette différence s'établit à 1·7 an pour les époux de 20 à 24 ans et à 10·3 ans pour ceux de 45 à 49 ans. Ceci est logique puisque l'âge du mari est généralement plus avancé que celui de la femme; par conséquent, plus son âge est avancé, plus s'élargit la possibilité de différence entre l'âge de sa femme et le sien. Par contre, lorsque les conjoints sont groupés selon l'âge de la femme on ne retrouve plus la même régularité. La différence d'âge entre les jeunes filles de 20 à 24 ans et leurs maris est plus grande que celle existant entre les conjoints des groupes plus âgés; mais l'écart ne diminue pas progressivement de groupe en groupe plus âgé; par exemple, cet écart est de 4·1 ans chez les épouses de 40 à 44 ans et de 3·6 ans seulement chez celles de 35 à 39 ans.

TABLEAUX LIX.—ÂGES DES ÉPOUX ET ÉPOUSES 1925

Par groupes d'âges des époux				Par groupes d'âges des épouses			
Groupes d'âges des mariés	Moyenne d'âge des époux	Moyenne d'âge des épouses	Moyenne de l'excédent d'âge des époux	Groupes d'âges des épouses	Moyenne d'âge des épouses	Moyenne d'âge des époux	Moyenne de l'excédent d'âge des époux
Moins de 20 ans	19·2	19·2	–	Moins de 20 ans	18·5	24·8	6·3
20–24 ans	22·8	21·1	1·7	20–24 ans	22·3	26·8	4·5

50 ans et plus	59·2	48·2	11·0	50 ans et plus	57·9	60·7	2·8

La répartition proportionnelle des maris de 1925 en six groupes d'âges est effectuée dans le tableau LX, d'abord pour l'ensemble du territoire d'enregistrement puis pour chaque province; pour ce territoire la comparaison remonte à 1921. Les proportions correspondantes quant aux nouvelles mariées sont indiquées dans le tableau LXI. On y remarquera qu'en 1925 2·4 p.c. des nouveaux maris et 23·4 p.c. des nouvelles mariées avaient moins de 20 ans. Au cours de la période quinquennale, l'âge des maris de ce groupe manifeste une tendance à s'élever. Il semble bien qu'il en soit ainsi chez le sexe féminin mais ce mouvement, plus irrégulier, nécessite pour sa mensuration une période plus longue. En 1925, la proportion la plus élevée des nouveaux maris de moins de 20 ans, soit 3·7 p.c., se trouve au Nouveau-Brunswick. Mais c'est dans la Saskatchewan, avec 29·9 p.c., puis au Nouveau-Brunswick et dans l'Alberta, l'un et l'autre avec 29·3 p.c., que se trouve la plus forte proportion des nouvelles mariées de cet âge.

Pour l'ensemble du territoire d'enregistrement, les nouveaux maris âgés de 40 ans et plus représentaient 11·4 p.c. du total en 1925 et les nouvelles mariées de ce groupe 5·9 p.c. Ni l'un ni l'autre sexe ne manifeste une tendance quelconque au cours du quinquennat.

La Colombie Britannique présente en 1925 la plus forte proportion des nouveaux maris ayant atteint leur quarantième anniversaire, soit 17·4 p.c. et c'est la province de l'Alberta qui en a le moins, soit 9·9 p.c. La Colombie Britannique tient encore la tête pour la plus forte proportion des nouvelles mariées de 40 ans et plus, soit 8·6 p.c.; la Saskatchewan et l'Alberta, où les femmes se marient le moins à cet âge, n'en avaient respectivement que 4·1 et 4·2 p.c.

Mariages précoces.—Toutes les provinces du Canada ont fixé par leurs lois l'âge minimum du mariage, au moins en l'absence du consentement des parents. Un résumé des lois sur la matière a été donné dans le troisième rapport annuel (p. lxxxix de l'Introduction).

En 1925, on a relevé dans la totalité du territoire d'enregistrement 953 mariages de jeunes filles âgées de 16 ans ou moins; il y en avait eu 832 l'année précédente et 820 en 1923. Nonobstant l'élévation du nombre absolu, ces mariages ne représentent que 2 p.c. de la totalité des mariages célébrés en 1925. D'ailleurs, sur ces 953 jeunes épouses, 772 avaient 16 ans accomplis. Evidemment, il est possible que quelques-unes d'entres elles aient quelque peu exagéré leur âge. Néanmoins, les chiffres du tableau LXII démontrent que les mariages de jeunes filles à peine pubères sont loin d'être fréquents dans ces huit provinces.

On a également relevé deux mariages de jeunes garçons âgés de 15 ans et de cinq autres âgés de 16 ans dans le territoire d'enregistrement en 1925. Il n'y eut pas de maris plus jeunes. Voici comment ils se divisent, par provinces, ainsi que l'âge de leurs femmes:—

Provinces	Mariés de 15 ans	Age de leur femme	Mariés de 16 ans	Age de leur femme
Ontario	2	16 ans 17 ans	3	17 ans (2) 18 ans (1)
Colombie Britannique	–	–	2	16 ans 31 ans

Lieu de naissance des conjoints.—On verra dans le tableau LXIII une classification des nouveaux maris de 1925 selon le lieu de leur naissance et dans le tableau LXIV la même classification pour les nouvelles mariées. La proportion des nouveaux maris nés au Canada varie entre 95·8 p.c. dans l'île du Prince-Edouard et 37·5 p.c. dans l'Alberta, tandis qu'au regard des nouvelles mariées régnicoles, cette proportion oscillait entre 95·6 p.c. dans l'île du Prince-Edouard et 42·6 p.c. dans la Colombie Britannique. Ainsi que l'on devait s'y attendre, on trouve dans les provinces de l'ouest une proportion sensiblement moindre de régnicoles contractant mariage que dans les provinces de l'est.

TABLEAU LXIII.—RÉPARTITION PROPORTIONNELLE DES ÉPOUX, PAR LIEU DE NAISSANCE, 1925,

STATISTIQUES VITALES DU YUKON ET DES TERRITOIRES DU NORD-OUEST

Les naissances, mariages et décès constatés au Yukon et dans les Territoires du Nord-Ouest en 1925, sont énumérés dans les tableaux suivants. On a distingué les statistiques de ces territoires de celles des huit provinces constituant le territoire d'enregistrement, parce que (1) les données sont considérées comme incomplètes et on ne connait pas suffisamment les détails se rapportant à la population de ces régions pour permettre la computation des coefficients; (2) le nombre des naissances, mariages et décès est si minime qu'il n'affecte pas les totaux s'appliquant au territoire d'enregistrement; (3) les rubriques diverses de classification dont on se sert pour commenter les naissances, mariages et décès des huit provinces ne peuvent être utilisées ici, en raison du manque d'informations.

TABLEAU LXV.—STATISTIQUES VITALES DU TERRITOIRE DU YUKON POUR 1925

Mois	Naissances	Décès	Mariages
Janvier	1	1	–
Février	2	2	–
Mars	5	6	1
Avril	2	6	1
Mai	–	3	–
Juin	1	5	3
Juillet	4	20	1
Août	2	4	3
Septembre	1	4	3
Octobre	1	4	2
Novembre	3	4	–
Décembre	–	4	3
Total	**22**	**63**	**17**

NOTA.—Deux décès sont ceux d'enfants de moins d'un an; l'âge de 4 défunts est inconnu.

TABLEAU LXVI.—STATISTIQUES VITALES DES TERRITOIRES DU NORD-OUEST POUR 1925

Mois	Naissances	Décès	Mariages
Janvier	2	1	1
Février	5	2	–
Mars	8	2	–
Avril	1	–	–
Mai	3	1	–
Juin	6	2	3
Juillet	7	2	24

TABLE 28—Causes of death by sex and age, in Registration Area and in each province, 1925—*con.*

REGISTRATION AREA—con.

Int. list No.	Causes of death — Causes de décès		Total	Ages								
				Under 1 year — Moins de 1 an	1 year — 1 an	2 years — 2 ans	3 years — 3 ans	4 years — 4 ans	5 to 9 years — 5 à 9 ans	10 to 14 years — 10 à 14 ans	15 to 19 years — 15 à 19 ans	20 to 24 years — 20 à 24 ans
	CLASS VI–con.—**CLASSE VI**–fin											
114	Diarrhoea and enteritis (2 years or over)— Diarrhée et entérite (deux ans ou au-dessus).	M.	204	–	–	49	21	19	14	2	3	2
		F.	207	–	–	41	22	12	8	4	3	4
116	Diseases due to other intestinal parasites— Affections dues à d'autres parasites intestinaux.	M.	4	–	2	–	1	–	–	–	–	–
		F.	3	–	–	2	1	–	–	–	–	–
	(a) Cestodes (hydatids of the liver excepted)—Cestodes (non compris les hydatides du foie).	M.	–	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
	(b) Trematodes—Trématodes.....	M.	–	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
	(c) Nematodes (other than ankylostoma)—Nématodes (autres que ankylostomiase).	M.	3	–	1	–	1	–	–	–	–	–
		F.	1	–	–	–	1	–	–	–	–	–
	(d) Coccidia—Coccidies.....	M.	–	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
	(e) Other parasites specified—Autres parasites spécifiés.	M.	–	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
	(f) Parasites not specified—Parasites non spécifiés.	M.	1	–	1	–	–	–	–	–	–	–
		F.	2	–	–	2	–	–	–	–	–	–
117	Appendicitis and typhlitis—Appendicite et typhlite.	M.	570	–	5	8	12	9	69	75	70	51
		F.	371	2	1	10	11	14	50	54	36	34
118	Hernia, intestinal obstruction—Hernie, obstruction intestinale.	M.	367	56	9	1	2	3	1	3	9	10
		F.	302	39	3	2	1	2	1	3	1	5
	(a) Hernia—Hernie.....	M.	140	8	1	–	–	–	–	1	1	5
		F.	83	1	–	–	–	–	–	–	–	2
	(b) Intestinal obstruction—Obstruction intestinale.	M.	227	48	8	1	2	3	1	2	8	5
		F.	219	38	3	2	1	2	1	3	1	3
119	Other diseases of the intestines—Autres affections des intestins.	M.	69	11	1	2	–	2	1	2	1	2
		F.	55	6	1	–	–	–	2	–	–	2
120	Acute yellow atrophy of the liver—Atrophie jaune aiguë du foie.	M.	10	–	–	–	–	–	1	–	2	–
		F.	9	–	–	–	–	–	1	–	–	–
122	Cirrhosis of the liver—Cirrhose du foie....	M.	133	–	–	–	1	–	1	2	1	1
		F.	81	1	1	1	–	–	–	2	–	1
	(a) Specified as alcoholic — Spécifiée comme alcoolique.	M.	3	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
	(b) Not specified as alcoholic—Non spécifiée comme alcoolique.	M.	130	–	–	–	1	–	1	2	1	1
		F.	81	1	1	1	–	–	–	2	–	1
123	Biliary calculi—Calculs biliaires.....	M.	38	–	–	–	–	–	–	–	1	–
		F.	96	–	–	–	–	–	–	–	–	2
124	Other diseases of the liver—Autres affections du foie.	M.	114	5	–	2	1	–	1	2	–	–
		F.	229	2	3	–	–	1	1	3	3	5
125	Diseases of the pancreas—Affections du pancréas.	M.	10	–	–	–	–	–	–	–	–	–
		F.	22	–	–	–	1	–	–	–	–	–
126	Peritonitis without specified cause—Péritonite sans cause indiquée.	M.	44	7	2	3	2	1	3	1	–	1
		F.	46	3	1	1	4	–	4	1	1	2
127	Other diseases of the digestive system (cancer and tuberculosis excepted)— Autres affections de l'appareil digestif (cancer et tuberculose exceptés).	M.	–	–	–	–	–	–	–	–	–	–
		F.	1	–	–	–	–	–	–	–	1	–
	CLASS VII—NON-VENEREAL DISEASES OF THE GENITO-URINARY SYSTEM AND ANNEXA—CLASSE VII—AFFECTIONS NON VÉNÉRIENNES DE L'APPAREIL GÉNITO-URINAIRE ET DE SES ANNEXES.	Total	4,101	65	22	10	12	9	25	33	48	59
		M.	2,382	40	8	5	7	7	13	18	21	24
		F.	1,719	25	14	5	5	2	12	15	27	35
128	Acute nephritis (including unspecified, under 10 years of age)—Néphrite aiguë (y compris non spécifiée au-dessous de dix ans).	M.	154	20	5	5	3	5	9	9	7	5
		F.	131	9	8	4	5	1	8	7	4	6
129	Chronic nephritis (including unspecified, 10 years of age or over)—Néphrite chronique (y compris non spécifiée, dix ans ou au-dessus).	M.	1,419	1	–	–	3	2	3	6	11	16
		F.	1,176	1	–	–	–	–	3	6	15	14
131	Other diseases of the kidneys and annexa—Autres affections des reins et de leurs annexes.	M.	160	11	2	–	–	–	1	3	2	2
		F.	130	15	6	1	–	1	1	2	2	3
132	Calculi of the urinary passages—Calculs des voies urinaires.	M.	35	–	–	–	1	–	–	–	–	–
		F.	12	–	–	–	–	–	–	–	1	1
133	Diseases of the bladder—Affections de la vessie.	M.	94	2	–	–	–	–	–	–	–	1

TABLE 28—Causes of death by sex and age, in Registration Area and in each province, 1925—*con.*

REGISTRATION AREA—con.

Int. list No.	Causes of death — Causes de décès	Total	Ages								
			Under 1 year — Moins de 1 an	1 year — 1 an	2 years — 2 ans	3 years — 3 ans	4 years — 4 ans	5 to 9 years — 5 à 9 ans	10 to 14 years — 10 à 14 ans	15 to 19 years — 15 à 19 ans	20 to 24 years — 20 à 24 ans
	CLASS VII-con.—**CLASSE VII**-fin										
134	Diseases of the urethra, urinary abscess, etc.—Affections de l'urètre, abcès urineux, etc.	M. 18	–	–	–	–	–	–	–	1	–
		F. 2	–	–	–	–	–	–	–	–	–
	(a) Stricture of the urethra—Rétrécissement de l'urètre.	M. 13	–	–	–	–	–	–	–	–	–
		F. 1	–	–	–	–	–	–	–	–	–
	(b) Other diseases of the urethra—Autres affections de l'urètre.	M. 5	–	–	–	–	–	–	–	1	–
		F. 1	–	–	–	–	–	–	–	–	–
135	Diseases of the prostate—Affections de la prostate.	M. 493	–	–	–	–	–	–	–	–	–
136	Non-venereal diseases of the male genital organs—Affections non vénériennes des organes génitaux de l'homme.	M. 9	6	1	–	–	–	–	–	–	–
137	Cysts and other benign tumours of the ovary—Kystes et autres tumeurs bénignes de l'ovaire.	F. 51	–	–	–	–	–	–	–	1	3
138	Salpingitis and pelvic abscess—Salpingite et abcès du bassin.	F. 53	–	–	–	–	–	–	–	2	5
139	Benign tumours of the uterus—Tumeurs bénignes de l'utérus.	F. 81	–	–	–	–	–	–	–	–	1
140	Non-puerperal uterine haemorrhage—Hémorragie utérine non puerpérale.	F. 2	–	–	–	–	–	–	–	–	–
141	Other diseases of the female genital organs —Autres affections des organes génitaux de la femme.	F. 51	–	–	–	–	–	–	–	2	2
142	Non-puerperal diseases of the breast (cancer excepted)—Affections non puerpérales du sein (cancer excepté).	F. 1	–	–	–	–	–	–	–	–	–
	CLASS VIII—THE PUERPERAL STATE—CLASSE VIII—ÉTAT PUERPÉRAL.	**Total 873**	–	–	–	–	–	–	1	43	143
143	Accidents of pregnancy—Accidents de la grossesse.	F. 87	–	–	–	–	–	–	–	4	10
	(a) Abortion—Avortement	F. 39	–	–	–	–	–	–	–	3	7
	(b) Ectopic gestation—Gestation ectopique.	F. 30	–	–	–	–	–	–	–	–	–
	(c) Others under this title—Autres sous ce titre.	F. 15	–	–	–	–	–	–	–	1	1
	(d) Abortion, self-induced—Avortement provoqué par soi-même.	F. 3	–	–	–	–	–	–	–	–	2
144	Puerperal haemorrhage—Hémorragie puerpérale.	F. 121	–	–	–	–	–	–	–	2	15
145	Other accidents of labour—Autres accidents de l'accouchement.	F. 102	–	–	–	–	–	–	–	3	13
	(a) Caesarean section—Opération césarienne.	F. 23	–	–	–	–	–	–	–	1	4
	(b) Difficult labour—Accouchement laborieux.	F. 29	–	–	–	–	–	–	–	–	1
	(c) Other surgical operations and instrumental delivery—Autres opérations chirurgicales et application d'instruments.	F. 22	–	–	–	–	–	–	–	–	5
	(d) Uncontrollable vomiting—Vomissements incontrôlables.	F. 18	–	–	–	–	–	–	–	1	3
	(e) Rupture of uterus in labour, etc.— Rupture de l'utérus durant l'accouchement, etc.	F. 10	–	–	–	–	–	–	–	1	–
146	Puerperal septicaemia—Septicémie puerpérale.	F. 260	–	–	–	–	–	–	–	15	54
147	Puerperal phlegmasia alba dolens, puerperal embolism, sudden death in puerperium—Phlegmasia alba dolens, embolie, mort subite puerpérales.	F. 62	–	–	–	–	–	–	–	1	7
148	Puerperal albuminuria and convulsions— Albuminurie et éclampsie puerpérales.	F. 187	–	–	–	–	–	–	1	14	32
149	Following childbirth (not otherwise defined)—Suites de couches (sans autres explications).	F. 53	–	–	–	–	–	–	–	4	12
150	Puerperal diseases of the breast—Affections puerpérales de la mamelle.	F. 1	–	–	–	–	–	–	–	–	–

		F.	24	–	1	1	1	–	4	3	1	2
118	Hernia, intestinal obstruction—Hernie, obstruction intestinale.	M.	23	4	–	1	–	–	–	–	–	–
		F.	21	3	–	–	–	–	–	–	–	–
	(a) Hernia—Hernie.....	M.	10	–	–	–	–	–	–	–	–	–
		F.	7	–	–	–	–	–	–	–	–	–
	(b) Intestinal obstruction—Obstruction intestinale.	M.	13	4	–	1	–	–	–	–	–	–
		F.	14	3	–	–	–	–	–	–	–	–
119	Other diseases of the intestines—Autres affections des intestins.	M.	7	2	–	–	–	1	–	–	–	–
		F.	4	–	–	–	–	–	–	–	–	–
120	Acute yellow atrophy of the liver—Atrophie jaune aiguë du foie.	M.	1	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
122	Cirrhosis of the liver—Cirrhose du foie....	M.	23	–	–	–	–	–	–	–	–	–
		F.	4	–	–	–	–	–	–	1	–	–
	(a) Specified as alcoholic—Spécifiée comme alcoolique.	M.	1	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
	(b) Not specified as alcoholic—Non spécifiée comme alcoolique.	M.	22	–	–	–	–	–	–	–	–	–
		F.	4	–	–	–	–	–	–	1	–	–
123	Biliary calculi—Calculs biliaires.....	M.	2	–	–	–	–	–	–	–	–	–
		F.	2	–	–	–	–	–	–	–	–	–
124	Other diseases of the liver—Autres affections du foie.	M.	12	–	–	–	–	–	–	–	–	–
		F.	13	–	–	–	–	–	–	–	–	1
125	Diseases of the pancreas—Affections du pancréas.	M.	2	–	–	–	–	–	–	–	–	–
		F.	2	–	–	–	1	–	–	–	–	–
126	Peritonitis without specified cause—Péritonite sans cause spécifiée.	M.	1	1	–	–	–	–	–	–	–	–
		F.	1	–	–	–	–	–	–	–	–	–
	CLASS VII—NON-VENEREAL DISEASES OF THE GENITO-URINARY SYSTEM AND ANNEXA—CLASSE VII—AFFECTIONS NON VÉNÉRIENNES DE L'APPAREIL GÉNITO-URINAIRE ET DE SES ANNEXES.	Total	335	7	–	2	2	1	1	3	3	6
		M.	200	3	–	–	1	–	1	–	2	2
		F.	135	4	–	2	1	1	–	3	1	4
128	Acute nephritis (including unspecified, under 10 years of age)—Néphrite aiguë (y compris non spécifiée au-dessous de dix ans.)	M.	14	–	–	–	1	–	–	–	–	1
		F.	9	1	–	1	1	–	–	–	–	1
129	Chronic nephritis (including unspecified, 10 years of age or over—Néphrite chronique (y compris non spécifiée, dix ans ou au-dessus).	M.	124	1	–	–	–	–	1	–	2	1
		F.	88	1	–	–	–	–	–	2	1	2
131	Other diseases of the kidneys and annexa—	M.	15	–	–	–	–	–	–	–	–	–
	Autres affections des reins et de leurs annexes.	F.	12	2	–	1	–	1	–	1	–	–
132	Calculi of the urinary passages—Calculs des voies urinaires.	M.	4	–	–	–	–	–	–	–	–	–
		F.	1	–	–	–	–	–	–	–	–	–
133	Diseases of the bladder—Affections de la vessie.	M.	4	1	–	–	–	–	–	–	–	–
		F.	3	–	–	–	–	–	–	–	–	–
134	Diseases of the urethra, urinary abscess, etc.—Affections de l'urètre, abcès urineux, etc.	M.	2	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
	(a) Stricture of the urethra—Rétrécissement de l'urètre.	M.	2	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
	(b) Other diseases of the urethra—Autres affections de l'urètre.	M.	–	–	–	–	–	–	–	–	–	–
		F.	–	–	–	–	–	–	–	–	–	–
